Data-Driven Modeling & Scientific Computation J. Nathan

Kutz,2013-08-08 The burgeoning field of data analysis is expanding at an incredible pace due to the proliferation of data collection in almost every area of science The enormous data sets now routinely encountered in the sciences provide an incentive to develop mathematical techniques and computational algorithms that help synthesize interpret and give meaning to the data in the context of its scientific setting A specific aim of this book is to integrate standard scientific computing methods with data analysis By doing so it brings together in a self consistent fashion the key ideas from statistics time frequency analysis and low dimensional reductions The blend of these ideas provides meaningful insight into the data sets one is faced with in every scientific subject today including those generated from complex dynamical systems This is a particularly exciting field and much of the final part of the book is driven by intuitive examples from it showing how the three areas can be used in combination to give critical insight into the fundamental workings of various problems Data Driven Modeling and Scientific Computation is a survey of practical numerical solution techniques for ordinary and partial differential equations as well as algorithms for data manipulation and analysis Emphasis is on the implementation of numerical schemes to practical problems in the engineering biological and physical sciences An accessible introductory to advanced text this book fully integrates MATLAB and its versatile and high level programming functionality while bringing together computational and data skills for both undergraduate and graduate students in scientific computing

Recent Advances in Modeling and Forecasting Kaiyu Saburo Saito,Kenichi Ishibashi,Kosuke Yamashiro,2023-09-08 This book is the first comprehensive presentation of a Kaiyu Markov model with covariates and a multivariate Poisson model with competitive destinations These two models are core techniques when the authors and colleagues conduct their Kaiyu studies The two models are usually used to forecast the effects of specific urban redevelopment on both the number of visitors and consumer shop around or Kaiyu movements Their Kaiyu studies originated from the constructions of a Kaiyu Markov model and the disaggregated hierarchical decision Huff model almost

simultaneously around the early 1980s This book retrospectively reviews how these models have evolved from the start to the present state and previews the ongoing efforts to make further extensions of these models The extension of the Huff model started from the disaggregated hierarchical decision Huff model with shop arounds In retrospect the model formulated the consumer's simultaneous choice of destinations as a joint probability The mechanism to determine this joint probability was a recursive conditional probability system Now the Huff model has shifted from joint probability to multivariate frequency Poisson with competitive destinations On the other hand the Kaiyu Markov model started from a descriptive model Because it cannot forecast changes in shop arounds or consumer Kaiyu behaviors the Kaiyu Markov model with covariates was developed in which entrance and shop around choice probabilities are explained by the respective two logit models with covariates such as distances and shop floor areas The noticeable point is that it can explain consumers probability of quitting their shop arounds Thus the model enables one to evaluate the effects of urban revitalization policy that promotes consumers shop arounds or Kaiyu behaviors Furthermore if the Kaiyu Markov model can estimate the actual numbers of flows of consumers shop arounds among shopping sites the corresponding money flows also can be estimated as economic effects This book discusses from scratch the evolution of all these topics Thus this book provides the basics of the Kaiyu Markov model a tutorial for the theory and estimation of the conditional logit model and a chapter serving as a practical research manual for forecasting changes caused by urban development based on consumers Kaiyu behaviors
