Introduction to Built Asset Management Anthony Higham, Jason Challender, Greg Watts, 2022-01-25 *Introduction to Built Asset Management* Provides a multidisciplinary introduction to building maintenance management and execution covering a wide range of current technical and management issues The maintenance and

upgrading of existing buildings is no longer viewed as separate from the operational phase of the completed building. Maintenance and management are now regarded as fundamental parts of a building's life cycle forming a significant percentage of the construction industry's total output. As higher education programmes in the UK and elsewhere continue to place greater emphasis on the longer term view of construction projects, students and instructors require a thorough and up to date textbook that emphasises the comprehensive nature of building maintenance. **Introduction to Built Asset Management** is a systematic introduction to both the technology and management issues central to building maintenance and refurbishment. Covering the entire life cycle of built assets, the textbook reviews the role of framework agreements, describes key performance indicators, discusses recent advancements in the procurement of maintenance activities and more. Detailed yet accessible chapters include illustrative examples, seminar questions and self assessment tasks that enable students to measure their progress as they work through the material. Designed to meet the needs of today's learners, this much needed textbook addresses a variety of both environmental and commercial concerns. Evaluates important concepts of sustainability, sustainable maintenance and carbon resilience. Discusses the growing retrofit market in the wider context of asset management and maintenance. Describes information management tools such as building information modelling (BIM) and geographic information systems (GIS). **Introduction to Built Asset Management** is ideally suited for courses in construction, construction management, building surveying and facilities management with modules in built asset management and maintenance.

**Ferry and Brandon's Cost Planning of Buildings** Richard Kirkham, 2014-12-15. This new edition of the classic quantity surveying textbook retains its basic structure but has been thoroughly updated to reflect recent changes in the industry, especially in procurement. Although over the last 20 years a number of new procurement methods have evolved and become adopted, the recession has seen many clients revert to established traditional methods of procurement so the fundamentals of cost planning still apply and should not be ignored. The first edition of this leading textbook was published in 1964 and it continues to provide a comprehensive introduction to the practice and procedures of cost planning in the procurement of buildings. This 9th edition has been thoroughly updated to reflect changes that have occurred in the UK construction industry in the past six years. Whilst retaining its core structure of the three phase cost planning process originally developed by Ferry and Brandon, the text provides a thorough grounding in contemporary issues including procurement innovation, whole life cycle costing and modelling techniques. Designed to support the core cost planning studies covered by students reading for degrees in quantity surveying and construction management, it provides a platform for understanding the fundamental importance of effective cost planning practice. The principals of elemental cost planning are covered from both pre and post contract perspectives, the role of effective briefing and client stakeholder engagement as best practice is also reinforced in this text. This new edition addresses The Soft Landings Framework, a new govt initiative especially for schools to make buildings perform radically better and much more sustainably. Puts focus on actual

performance in use at brief stage during design and construction and especially before and after handover Covers recent changes in procurement especially under the NEC and PFI Provides more on PPP and long term maintenance issues Offers an improved companion website with tutorial worksheets for lecturers and Interactive spreadsheets for students e.g development appraisal models lifecycle costing models     "Code of Massachusetts regulations, 2014" ,2014 Archival snapshot of entire looseleaf Code of Massachusetts Regulations held by the Social Law Library of Massachusetts as of January 2020     The Stationery Office Annual Catalogue Stationery Office (Great Britain),2017     *Guide to JCT Design and Build Contract 2024* Sarah Lupton,Manos Stellakis,2025-04-01 The latest edition of the JCT Guide series is an essential resource for architects working with the JCT Design Build Contract 2024 Organised by topic this guide offers a clear practical breakdown of the contract s provisions procedures and party obligations It also addresses potential contractual issues with support from the latest legislation and case law Key updates in the 2024 edition Comprehensive analysis of the JCT Design Build Contract 2024 covering all recent changes Legislative updates including the Building Safety Act Building Regulations Part 2A and the Procurement Act 2023 Case law coverage on crucial topics like design liability responsibility for employer requirements and planning permission concurrent delay practical completion and more Comparative insights on other JCT contracts and NEC4 offering a broader view of contract management New figures and tables improving clarity and ease of use Whether you re a seasoned practitioner or a student preparing for exams this guide is designed to simplify complex contract administration and ensure compliance with the latest legal requirements With its clear structure and expert analysis it s an indispensable tool for architects handling the JCT Design Build Contract     Guide to RIBA Domestic and Concise Building Contracts 2018 Sarah Lupton,2019-06-27 This latest title from the author provides comprehensive guidance to RIBA s two updated building contracts the RIBA Domestic Building Contract 2018 and the RIBA Concise Building Contract 2018 Introducing the contracts features and benefits and covering all aspects of their use from choosing and forming the right one for your project to guiding the parties through all its various stages the Guide has been expanded with increased assistance on choice of form tendering and contract formation Additional detail on role and liabilities of contract administrator has been added along with a new section on practical completion and completion including certification Assuming no current knowledge of the law or contract administration this acts as a standalone guide for new users of the RIBA contracts as well as a valuable update for previous users It is an ideal companion for anybody using the latest building contracts     Estimating, Costing and valuation Sandeep Panchal,2025-06-01     **Current Perspectives on Applied Geomorphology** António Vieira,Resat Oyguc,2024-03-13 Applied geomorphology aims to understand the constraints that natural dynamics impose on human activities as well as societal impacts on geomorphic forms and processes It is therefore concerned with the analysis and interpretation of landforms resulting from the interaction between anthropic and non anthropic so called natural processes using methodologies specific to this scientific area This book provides a comprehensive

overview of applied geomorphology It includes five chapters that address such topics as geodiversity as a tool for nature conservation geoheritage and its enhancement in the context of geotourism piles as structural elements slope stability and landslides     Contracts for Infrastructure Projects Philip Loots,Donald Charrett,2022-05-18 Contracts for Infrastructure Projects An International Guide provides a guide to the law relating to construction contracts for infrastructure projects it is intended for the use of engineers and other professionals who are involved in the negotiation and administration of construction contracts to enable them to understand the risks involved and how to minimise them The principles of construction law outlined in this book apply to small construction contracts as well as very large contracts for which the contract sum may be in the billions of dollars The focus of the book is on construction contracts entered into by commercial organisations operating in a business environment Contract law generally assumes that such parties are of equal bargaining power and puts relatively few fetters on their ability to agree on the terms of their bargain However where legislation impacts on the execution of construction projects or the operation of construction contracts it may be of major importance in protecting the rights of weaker parties or third parties It is assumed that the users of this book will be familiar with the general concepts of tendering and contracting for engineering and construction projects but may not have any formal knowledge of the law To the extent possible the emphasis is on general principles of contract law that are widely accepted in many jurisdictions Examples are drawn from case law in a number of common law jurisdictions as well as from civil codes
