Quantifying Uncertainty in Subsurface Systems Céline Scheidt, Lewis Li, Jef Caers, 2018-04-27 Under the Earth's surface is a rich array of geological resources many with potential use to humankind. However, extracting and harnessing them comes with enormous uncertainties, high costs, and considerable risks. The valuation of subsurface resources involves assessing discordant factors to produce a decision model that is functional and sustainable. This volume provides real-world examples relating to oilfields, geothermal systems, contaminated sites, and aquifer recharge. Volume highlights include: A multi-disciplinary treatment of uncertainty quantification; Case studies with actual data that will appeal to methodology developers; A Bayesian evidential learning framework that reduces computation and modeling time. **Quantifying Uncertainty in Subsurface Systems** is a multidisciplinary volume that brings together five major fields: information science, decision science, geosciences, data science, and computer science. It will appeal to both students and practitioners and be a valuable resource for geoscientists, engineers, and applied mathematicians. Giant Hydrocarbon Reservoirs of The World Paul Mitchell Harris,L. James Weber,2006 Reservoirs described in this volume are located in the Middle East Asia West Africa North and South America The authors explore historical and alternative approaches to reservoir description characterization and management as well as examining appropriate levels and timing of data gathering technology applications evaluation techniques and management practices in various stages in the life of individual development projects The giant fields discussed address issues important to reservoir description characterization and management from both geologic engineering perspectives Monitoring Land Subsidence Using Remote Sensing Massimo Fabris,Nicola Cenni,Simone Fiaschi,2021-09-06 In this book are reported nine works related to land subsidence monitoring using remote sensing techniques Land subsidence is a common phenomenon in many regions of the world where it causes degradation of local ecosystems and disruption of economic activities Its effects are more evident in densely populated areas in particular in low lying territories such as river deltas and coastal areas where the combination of land subsidence and sea level rise increases the flooding risk For this reason the monitoring of ground deformations is a crucial step to obtain important information for the development of risk mitigation strategies In the presented papers the characteristics of land subsidence occurring in different study areas are described and recent developments in the used methodologies for the monitoring of the ground displacements are discussed and validated also by means of ground based data Moreover advantages and disadvantages of the adopted techniques are highlighted The outcomes of these research works can provide national and local authorities with useful information for the implementation of integrated monitoring systems in the areas most affected by land subsidence Paleozoic Stratigraphy and Resources of the Michigan Basin G. Michael Grammer,William B. Harrison III,David A. Barnes,2018-04-12 The Michigan Basin is a classic intracratonic basin that has played a significant role in the fundamental understanding of geological processes in such basins and has been an important resource for oil and gas economic minerals groundwater and coal Despite the classic nature of the Michigan Basin there has not been a special volume dedicated to the basin in nearly 25 years Since that time new advancements in the geological sciences particularly the utilization of high resolution sequence stratigraphy and three dimensional geostatistical modeling have led to a new and more comprehensive understanding of the Paleozoic sedimentary packages of the Michigan

Nathan Meehan,2016-04-05 As the shale revolution continues in North America unconventional resource markets are emerging on every continent In the next eight to ten years more than 100 000 wells and one to two million hydraulic fracturing stages could be executed resulting in close to one trillion dollars in industry spending This growth has prompted professionals ex **Sedimentary Facies Reconstruction and Kinematic Restoration of Tight Gas Fields** Anna Alexandra Vackiner,2013-03-20 The thesis of Anna Alexandra Vackiner focuses on the geometric architecture and tectonic evolution of the Permian series combining seismic interpretation 3D block field studies in an analogue basin Panamint Valley in California as well as 2D restoration of representative cross sections through time in order to illustrate the complex interaction between multiphase extension inversion and salt diapirism It will be of major interest for exploration geologists involved in tectonically complex areas Fran ois Roure August 2012 This thesis improves the understanding and localization of the Upper Rotliegend II tight gas reservoir rock facies It provides insights into the detailed Upper Rotliegend II palaeo topography and local tectonically induced sediment thickness changes prior to a multi phase tectonic overprinting The research presented in this study further focuses on the tectonically induced synsedimentary facies distribution in transtensional continental settings on the basis of a comparison with a modern field analogue which enables a detailed analysis of the reservoir rock s distribution and its properties The study is rounded off with an analysis of the influence of the multiphase tectonic overprinting on the mature Upper Rotliegend II reservoir rocks Tertiary Deep-Marine Reservoirs of the North Sea Region T. McKie,P.T.S. Rose,A.J. Hartley,D.W. Jones,T.L. Armstrong ,2015-11-02

Discovery of the Arbroath Montrose and Forties fields initiated intensive exploration of the Tertiary deep marine play in the North Sea region. Subsequent discoveries demonstrated the success of this play and the geological diversity of the depositional systems. The play is now mature and in many areas the remaining exploration potential is likely to be dominated by small subtle traps with a major component of stratigraphic trapping. Economically marginal discoveries need an in depth understanding of subsurface uncertainty to mitigate risk with limited appraisal wells. Mature fields require detailed geological understanding in the search for the remaining oil. This volume focuses on the regional depositional setting of these deep marine systems providing a stratigraphic and palaeogeographical context for exploration and development case histories that outline the challenges of producing from these reservoirs. The fields are arranged around the production life cycle describing the changing needs of geological models as the flow of static and dynamic data refines geological understanding and defines the nature of new opportunities as fields mature.
