Secure Information Networks Bart Preneel, 2013-03-14 This volume contains papers presented at the fourth working conference on Communications and Multimedia Security CMS 99 held in Leuven Belgium from September 20-21, 1999. The Conference arranged jointly by Technical Committees 11 and 6 of the International Federation of Information Processing IFIP was organized by the Department of Electrical Engineering of the Katholieke Universiteit Leuven. The name Communications and Multimedia Security was used for the first time in 1995 when Reinhard Posch organized the first in this series of conferences in Graz, Austria, following up on the previously national Austrian IT Sicherheit conferences held in Klagenfurt 1993 and Vienna 1994. In 1996 CMS took place in Essen, Germany; in 1997 the conference moved to Athens, Greece. The Conference aims to provide an international forum for presentations and discussions on protocols and techniques for providing secure information networks. The contributions in this volume review the state of the art in communications and multimedia security and discuss practical topics, experiences, and new developments. They cover a wide spectrum including network security, web security, protocols for entity authentication and key agreement, protocols for mobile environments, applied cryptology, watermarking, smart cards, and legal aspects of digital signatures.

Smart Card Research and Advanced Applications Josep Domingo-Ferrer, David Chan, Anthony Watson, 2013-03-14 Smart cards or IC cards offer a huge potential for information processing purposes. The portability and processing power of IC cards allow for highly secure conditional access and reliable distributed information processing. IC cards that can perform highly sophisticated cryptographic computations are already available. Their application in the financial services and telecom industries are well known. But the potential of IC cards goes well beyond that. Their applicability in mainstream Information Technology and the Networked Economy is limited mainly by our imagination; the information processing power that can be gained by using IC cards remains as yet mostly untapped and is not well understood. Here lies a vast uncovered research area which we are only beginning to assess and which will have a great impact on the eventual success of the technology. The research challenges range from electrical engineering on the hardware side to tailor-made cryptographic applications on the software side and their synergies. This volume comprises the proceedings of the Fourth Working Conference on Smart Card Research and Advanced Applications CARDIS 2000 which was sponsored by the International Federation for Information Processing IFIP and held at the Hewlett Packard Labs in the United Kingdom in September 2000. CARDIS conferences are unique in that they bring together researchers who are active in all aspects of design of IC cards and related devices and environments; thus

stimulating synergy between different research communities from both academia and industry This volume presents the latest advances in smart card research and applications and will be essential reading for smart card developers smart card application developers and computer science researchers involved in computer architecture computer security and cryptography
