NAME _____

Goal 1: Learner will develop abilities necessary to do and understand scientific inquiry.

1.01 Identify biological problems and questions that can be answered through scientific investigations.

1.02 Design and conduct scientific investigations to answer biological questions (create testable hypotheses, identify variables, use a control or comparison group when appropriate, select and use appropriate measurement tools, collect and record data, organize data into charts and graphs, analyze and interpret data, communicate findings).

You have measured the rate at which a fish breaths at various temperatures by counting the rate at which its gills open. The data is below.

Breathing rate Temperature

19/min 5 deg C

25/min 10 deg C

34/min 30 deg C

Bromothymol blue turns to bromothymol yellow in the presence of carbon dioxide. When the carbon dioxide is removed, the solution will return to a blue color. Two green water plants were placed in separate test tubes, each containing water and bromothymol yellow. Both test tubes were corked. One tube was placed in the light, the other in the dark. After several days, the liquid in the tube exposed to light turned blue.

1. What is the independent variable in this experiment?

Light

2. What is the dependent variable in this experiment?

Color of the bromothymol

3. What is the control for this experiment?

Test tube in the dark

4. This demonstration illustrates that, during photosynthesis, green plants take in carbon dioxide.
