Geographies of City Science Tanya O'Sullivan, 2019-10-22 Dublin at the turn of the twentieth century was both the second city of the British Empire and the soon to be capital of an emerging nation presenting a unique space in which to examine the past relationship between science and the city Drawing on both geography and biography Geographies of City Science underscores the crucial role urban spaces played in the production of scientific knowledge Each

chapter explores the lives of two practitioners from one of the main religious and political traditions in Dublin either Protestant and Unionist or Catholic and Nationalist As Tanya O Sullivan argues any variation in their engagement with science had far less to do with their affiliations than with their life spaces domains where human agency and social structures collide Focusing on nineteenth century debates on the origins of the universe as well as the origins of form humans and language O Sullivan explores the numerous ways in which scientific meaning relating to origin theories was established and mobilized in the city By foregrounding Dublin her book complements more recent attempts to enrich the historiography of metropolitan science by examining its provenance in less well known urban centers
