The Materials Research Science and Engineering Centers MRSEC Impact Assessment Committee was convened by the National Research Council in response to an informal request from the National Science Foundation Charged to examine the impact of the MRSEC program and to provide guidance for the future the committee included experts from across materials research as well as several from outside the field The committee developed a general methodology to examine the MRSEC centers and after extensive research and analysis came to the following conclusions MRSEC center awards continue to be in great demand The intense competition within the community for them indicates a strong perceived value Using more quantitative measures the committee examined the performance and impact of MRSEC activities over the past decade in the areas of research facilities education and outreach and industrial collaboration and technology transfer The MRSEC program has had important impacts of the same high standard of quality as those of other multi investigator or individual investigator programs Although the committee was largely unable to attribute observed impacts uniquely to the MRSEC program MRSECs generally mobilize efforts that would not have occurred otherwise Because of an observed decline in the effectiveness of the centers the committee recommended a restructuring the MRSEC program to allow more efficient use and leveraging of resources The new program should fully invest in centers of excellence as well as in stand alone teams of researchers to allow tighter focus on key strengths of the program In its report the committee outlines one potential vision for how this might be accomplished in a revenue neutral fashion

Feyerabend on Logical Empiricism, Bohm & Kuhn Matteo Collodel, Eric Oberheim, 2024-08-27 The authors Matteo Collodel and Eric Oberheim take the reader on a journey through the early life of the famous Austrian philosopher Paul Feyerabend whose groundbreaking work *Against the Method* forged new paths in the philosophical understanding of science Collodel and Oberheim's book contains the translated correspondence of Feyerabend 1924-1994 with equally influential philosophers and scientists of the time including Rudolf Carnap, Herbert Feigl, Carl G. Hempel, J. J. C. Smart, David Bohm, and Thomas Kuhn. This book offers an entirely unique approach to the philosopher Paul Feyerabend. Informative, challenging, and profound, it immerses the reader deeply in the mind of a truly revolutionary philosopher of science. The main focus lies on the explanation of Paul Feyerabend's ideas on logical empiricism and quantum mechanics, which he developed especially in the 1960s. In order to appreciate the celebrated work of the philosopher, it is important to create an understanding of these formative years in Feyerabend's life and work. Anyone who knows similar discussions like the paradigm shift of Thomas Kuhn or has a passion for history, philosophy, and science will be fascinated by the works of Paul Feyerabend. As scientists and followers of Feyerabend, Collodel and Oberheim strive to pay respect to the philosopher and to make his work accessible to a whole new generation. **Monthly Catalogue, United States Public Documents** ,1993 *Monthly Catalog of United States Government Publications* ,1993 Military Construction Appropriations United States. Undergraduate Mathematics for the Life Sciences Glenn Ledder, Jenna P. Carpenter, Timothy D. Comar, 2013 There is a gap between the extensive mathematics background that is beneficial to biologists and the minimal mathematics background biology students acquire in their courses. The result is an undergraduate education in biology with very little quantitative content. New mathematics courses must be devised with the needs of biology students in mind. In this volume, authors from a variety of institutions address some of the problems involved in reforming mathematics curricula for biology students. The problems are sorted into three themes: Models, Processes, and Directions. It is difficult for mathematicians to generate curriculum ideas for the training of biologists, so a number of the curriculum models that have been introduced at various institutions comprise the Models section. Processes deals with taking that great course and making sure it is institutionalized in both the biology department as a requirement and in the mathematics department as a course that will live on even if the creator of the course is no longer on the faculty. Directions looks to the future with each paper laying out a case for pedagogical developments that the authors would like to see.
