Interim Report of the Committee on a Strategic Plan for U.S. Burning Plasma Research National Academies of Sciences, Engineering, and Medicine, Division on Engineering and Physical Sciences, Board on Physics and Astronomy, Committee on a Strategic Plan for U.S. Burning Plasma Research, 2018-03-19 In January 2003 President George W Bush announced that the United States would begin negotiations to join the ITER project and noted that if successful ITER would create the first fusion device capable of producing thermal energy comparable to the output of a power plant making commercially viable fusion power available as soon as 2050 The United States and the other ITER members are now constructing ITER with the aim to demonstrate that magnetically confined plasmas can produce more fusion power than the power needed to sustain the plasma This is a critical step towards producing and delivering electricity from fusion energy Since the international establishment of the ITER project ITER's construction schedule has slipped and ITER's costs have increased significantly leading to questions about whether the United States should continue its commitment to participate in ITER This study will advise how to best advance the fusion energy sciences in the United States given developments in the field the specific international investments in fusion science and technology and the priorities for the next ten years developed by the community and the Office of Fusion Energy Sciences FES that were recently reported to Congress It will address the

scientific justification and needs for strengthening the foundations for realizing fusion energy given a potential choice of U S participation or not in the ITER project and develops future scenarios in either case This interim report assesses the current status of U S fusion research and of the importance of burning plasma research to the development of fusion energy as well as to plasma science and other science and engineering disciplines The final report will present strategies that incorporate continued progress toward a burning plasma experiment and a focus on innovation

Fusion Energy Technology R&D Priorities Laila El-Guebaly, 2024-11-17 Fusion Energy Technology R D Priorities examines the current landscape of fusion technology With a strong focus on technological advances the book considers technical challenges and priorities to further the development of fusion research Beginning with an introduction to fusion technology research and development the book then presents an overview of basic magnetic fusion concepts experimental facilities and fusion materials R D Subsequent chapters then take a deep dive into capabilities of potential neutron sources for materials testing plasma facing components and blanket and tritium systems Vacuum vessels and shields and superconducting magnets are also highlighted before concluding with modelling techniques computational tools safety features and environmental considerations Presenting the most advanced developments in nuclear fusion R D this is an essential read for researchers and engineers interested in nuclear energy and fusion technology Presents the latest advances and developments in fusion science and technology Outlines the R D priorities and critical issues that are foundational to the further development of fusion energy technologies Identifies technical fusion challenges and considers future perspectives Reviews the present day status of essential R D programs that support fusion for energy
