Tang, 1975 **Probability Concepts in Engineering** Alfredo H-S. Ang, Wilson H. Tang, 2007 Apply the principles of probability and statistics to realistic engineering problems The easiest and most effective way to learn the principles of probabilistic modeling and statistical inference is to apply those principles to a variety of applications That's why Ang and Tang's Second Edition of Probability Concepts in Engineering previously titled Probability Concepts in Engineering Planning and Design explains concepts and methods using a wide range of problems related to engineering and the physical sciences particularly civil and environmental engineering Now extensively revised with new illustrative problems and new and expanded topics this Second Edition will help you develop a thorough understanding of probability and statistics and the ability to formulate and solve real world problems in engineering The authors present each basic principle using different examples and give you the opportunity to enhance your understanding with practice problems The text is ideally suited for students as well as those wishing to learn and apply the principles and tools of statistics and probability through self study Key Features in this 2nd Edition A new chapter Chapter 5 covers Computer Based Numerical and Simulation Methods in Probability to extend and expand the analytical methods to more complex engineering problems New and expanded coverage includes distribution of extreme values Chapter 3 the Anderson Darling method for goodness of fit test Chapter 6 hypothesis testing Chapter 6 the determination of confidence intervals in linear regression Chapter 8 and Bayesian regression and correlation analyses Chapter 9 Many new exercise problems in each chapter help you develop a working knowledge of concepts and methods Provides a wide variety of examples including many new to this edition to help you learn and understand specific concepts Illustrates the formulation and solution of engineering type probabilistic problems through computer based methods including developing computer codes using commercial software such as MATLAB and MATHCAD Introduces and develops analytical probabilistic models and shows how to formulate engineering problems under uncertainty and provides the fundamentals for quantitative risk assessment Probability Concepts in Engineering Planning and Design Alfredo H. The Handbook of Groundwater Engineering Jacques W. Delleur,2010-12-12 Due to the increasing demand for adequate water supply caused by the augmenting global population groundwater production has acquired a new importance In many areas surface waters are not available in sufficient quantity or quality Thus an increasing demand for groundwater has resulted However the residence of time of groundwater can be of the order of thousands of years while surface waters is of the order of days Therefore substantially more attention is warranted for transport processes and pollution remediation in groundwater than for surface waters Similarly pollution remediation problems in groundwater are generally complex This excellent timely resource covers the field of groundwater from an engineering perspective comprehensively addressing the range of subjects related to subsurface hydrology It provides a practical treatment of the flow of groundwater the transport of substances the construction of wells and well fields the production of groundwater and site characterization and remediation of groundwater pollution No other reference specializes in groundwater engineering to such a broad range of subjects Its use extends to The engineer designing a well or well field The engineer designing or operating a landfill facility for municipal or hazardous wastes The hydrogeologist investigating a contaminant plume The engineer examining the remediation of a groundwater pollution problem The engineer or lawyer studying the laws and regulations related to groundwater quality The scientist analyzing the mechanics of solute transport The geohydrologist assessing the regional modeling of aquifers The geophysicist determining the characterization of an aquifer The cartographer mapping aquifer characteristics The practitioner planning a monitoring network
