

A case study is a scenario in a particular professional context which students are expected to analyse and respond to, guided by specific questions posed concerning the situation. In many cases, the scenario or case study involves a number of issues or problems that must be dealt with in a professional workplace.

Case study assignments usually require students to identify problems and issues in a scenario, to demonstrate their developing knowledge of theories and professional policies and to make decisions and recommendations based on these to either prevent or solve some of the issues in that scenario.

There are several steps to writing an answer to a case study assignment:

## **STEP 1: Read case study and questions carefully**

Read the case and associated questions carefully. Highlight the main points of the case and any issues that you can identify.

Read the questions closely and analyse what they are requiring you to do.

Read the case again, linking the information that is relevant to each question you have been asked.

## **STEP 2: Identify the issues in the case study**

Case studies describe a situation which may arise in a particular profession or social context. They often involve a number of people in a complex situation. They will often describe a situation which is problematic, possibly in how it is dealt with, or in its complexity. An important part of your answer is to analyse the situation and to identify the issues/actions described in the case which may be problematic.

The following questions may help you to do this:

- What actions were taken in the case?
- Were these actions the most appropriate and why?
- Were there any consequences of the taken actions?
- Was anything omitted or not considered?
- Were actions/procedures in line with existing codes of practice, policy or theories?

## **STEP 3: Link theory to practice**

Use your knowledge of existing codes of practice, theories and/or other professional documents and behaviours to decide what was done appropriately and what was not. Make notes on these.

e.g. If someone was interviewed in your case study, were proper interviewing techniques used? Find theory on interviews in your professional context in your readings and make links as to what was done well and what was not done well. This can be expanded upon in your answer, with references to your readings.

## **STEP 4: Plan your answer**

It can be useful to use the questions you have been set as headings and to answer each part in turn, reducing the chance of omitting set questions. You can always take out the headings before you submit if you wish. Lecturers usually set questions in a logical order, so answer in the order they are written in your question.

## **STEP 5: Start writing your case study answer**

Like any assignment, you will need an introduction, body sections in which you answer the questions put to you regarding the case study, and a conclusion.

Frensch, Joachim Funke, 2014-04-04 This volume presents a state of the science review of the most promising current European research and its historic roots of research on complex problem solving CPS in Europe It is an attempt to close the knowledge gap among American scholars regarding the European approach to understanding CPS Although most of the American researchers are well aware of the fact that CPS has been a very active research area in Europe for quite some time they do not know any specifics about even the most important research Part of the reason for this lack of knowledge is undoubtedly the fact that European researchers for the most part have been rather reluctant to publish their work in English language journals The book concentrates on European research because the basic approach European scholars have taken to studying CPS is very different from one taken by North American researchers Traditionally American scholars have been studying CPS in natural domains physics reading writing and chess playing concentrating primarily on exploring novice expert differences and the acquisition of a complex skill European scholars in contrast have been primarily concerned with problem solving behavior in artificially generated mostly computerized complex systems While the American approach has the advantage of high external

validity the European approach has the advantage of system variables that can be systematically manipulated to reveal the effects of system parameters on CPS behavior The two approaches are thus best viewed as complementing each other This volume contains contributions from four European countries Sweden Switzerland Great Britain and Germany As such it accurately represents the bulk of empirical research on CPS which has been conducted in Europe An international cooperation started two years ago with the goal of bringing the European research on complex problem solving to the awareness of American scholars A direct result of that effort the contributions to this book are both informative and comprehensive
