Problem Coleman Raphael,2011-09-12 The purpose of this book is to demonstrate how our forward looking and progressive nation can be free of dependence on limited energy sources such as foreign oil This book will define energy and describe its current uses and sources We will ultimately recognize how we can economically and efficiently use the sun s energy to supply all of our current and future needs The book begins by defining energy and then giving examples such as hoisting a weight pushing a piston or boiling a pail of water Some of the common forms of energy are known as kinetic thermal chemical electrical radiant sound stored potential and nuclear These forms are described and exemplified Concern is sometimes expressed that world energy is being used up This is a meaningless concern Here we will evaluate and quantify the world s principal energy usage food heat transportation and industrial processes and consider the energy sources which provide this usage A sensible and economically viable plan is then proposed and described for meeting all our energy needs As we consider and examine various energy sources which mankind has available we easily come to the most dramatic and most important source for a sensible energy policy direct solar radiation We would satisfy all U S energy requirements if we were able to capture and make use of one hundredth of 1% of all the solar energy intercepted by the earth This is not a very difficult thing to do All we need is creative vision governmental support and the determination to become energy independent soon and our sensible goals will be achieved completely and economically **Design Is The Problem** Nathan

A Cubic Mile of Oil Hewitt

Crane,Edwin Kinderman,Ripudaman Malhotra,2010-06-03 One cubic mile of oil CMO corresponds very closely to the world s current total annual consumption of crude oil The world s total annual energy consumption from all energy sources is currently 3 0 CMO By the middle of this century the world will need between 6 and 9 CMO of energy per year to provide for its citizens Adequate energy is needed remove the scourge of poverty and provide food clothing and shelter for the people

around the world and more will be needed for measures to mitigate the potential effects of climate change such as building dikes and desalinating water A Cubic Mile of Oil describes the various energy sources and how we use them projects their future contributions and delineates what it would take to develop them to annually produce a CMO from each of them The requirement for additional energy in the future is so daunting that we will need to use all resources We also examine how improved efficiency and conservation measures can reduce future demand substantially and help distinguish approaches that make a significant impact as opposed to merely making us feel good Use of CMO eliminates a multitude of units like tons of coal gallons of oil and cubic feet of gas obviates the need for mind numbing multipliers such as billions trillions and quadrillions and replaces them with an easy to understand volumetric unit It evokes a visceral response and allows experts policy makers and the general public alike to form a mental picture of the magnitude of the challenge we face In the absence of an appreciation of the scale of the problem we risk squandering efforts and resources in pursuing options that will not meet tomorrow s global energy needs We must make critical choices and a common understandable language is essential for a sustained meaningful dialog
