Components of Prodigy RF

- A. Power Knob
- B. Boost Button
- C. Manual Override
- D. Display
- E. Connector to Auxiliary Power Port
- F. Remote Hand Held Unit
- G. Trailer Mount Power Module

Important Facts to Remember

- WARNING** The Prodigy RF may operate with reduced performance if the Remote Hand Held Unit is returned or disconnected while the trailer is in use.
- Do not reset or activate RF generating from coil plungers, two way radio or any (less than 12") to the Hand Held Unit or Power Module.
- The Prodigy RF employs an inertial sensor. It senses deceleration and generates an output that is based on deceleration, thus the term "Proportional Braking".
- The Prodigy RF will "HOLD" your trailer with 25% of power setting while you are at a standstill with brake pedal applied for longer than 5-7 seconds.
- The Prodigy RF will brake proportionally to errors. It will apply the appropriate brake voltage based on deceleration.
- WARNING** The Gross Combined Weight Rating (GCWR) must never exceed the vehicle manufacturer's recommendations.
- CAUTION** This control is not designed for use with electric-hydraulic trailer brake systems.
- CAUTION** Do not exchange or imitate Prodigy RF in use.

Installation Guide

Trailer Mount Power Module

Mounting Instructions

- WARNING** The Prodigy RF Power Module must be securely mounted to the trailer frame. Failure to install the Power Module within these constraints may cause impaired performance.

The Power Module can be mounted to any suitable surface on the trailer frame. The module cover should be approximately level, within $\pm 1^\circ$, and above the trailer frame rail. Preferred mounting location is on the side of the trailer frame rail with the 3 foot cable towards the tow vehicle.

- Select a location so that the Power Module's cover is in the UP direction.
- Use the four 1/8" x 14 x 1-1/4" self drilling screws (provided) to drill into the trailer frame. Torque screws according to Power Module. Tamper Resistant Washer Head Screws may be used for added security.
- Secure the seven 1-Way tow vehicle and trailer wiring.
- CAUTION** Use of different screws may damage the Power Module, or may not provide sufficient mounting.
- CAUTION** Do not mount in a concealed location, or inside a metal part of the trailer. Do not place inside a utility bay mounted on the trailer.
- CAUTION** Do not mount in a location that will interfere with a load equalizing hitch.

Connecting Power Module

Your Prodigy RF Power Module has a modified Baymouth 1-Way cable that will plug into the tow vehicle. Refer to Wiring Diagram for location of pins and functions. When all connections are made, this connection supplies all power and signals to both the Power Module and to the trailer. The trailer 1-Way cable is connected directly to the 1-Way connector on the rear of the Power Module. There is no additional wiring necessary on the trailer.

- WARNING** Tow vehicle Must be Capable of providing 12V @ 20A for Electric Brake Applications. Up to 6 brakes (3 axles).
- CAUTION** The Battery Charge to the trailer may be temporarily disconnected (approximately 1 minute) during braking if the total current to the Trailer (Battery Charge and Electric Brake) exceeds 20 Amps. This allows for full brake power without exceeding the tow vehicle's wiring capacity.

NOTE: Some factory wired tow vehicles disconnect the Battery Charge output in the 1-Way connector when the ignition is turned off. This will turn off the Power Module and the Hand Held Unit will display "n.c."

Remote Hand Held Unit

Plug the Hand Held Unit into any suitable 12V Auxiliary Power Port in the vehicle.

- Remote Hand Held Unit must be within easy reach of the operator.
- Do NOT operate with the Remote Hand Held Unit disconnected.

Automatic Leveling of the Sensor

The Prodigy RF will automatically acquire the proper level setting of the tow vehicle and trailer combination during the pairing operation.

Pairing Instructions

Synchronization of the Remote Hand Held Unit to the Power Module:

- Connect trailer to tow vehicle.
- Plug the Power Module 1-Way cable into the tow vehicle.
- Trailer's 1-Way connector must be disconnected from the Power Module.
- Start vehicle's engine. (Some vehicles require Key On to supply power to the 1-Way connector or Auxiliary Power Port).
- Plug the Remote Hand Held Unit into an auxiliary power source within easy reach of the operator.
- Turn the Power Knob to minimum position, Flashing 0.0.

- Turn the Power Knob to the MANUAL, OVERRIDE and BOOST BUTTON. The display will start from P.5 and end at P.A.

Once P.A. has been achieved, the Manual and Boost can be released.

- Press and hold the brake pedal until the display shows Flashing 0.0 for a correct pairing.

- Set the Power Knob to greater than minimum. Display now flashes "n.c." (not connected).

- Re-connect the Trailer 1-Way connector to the Power Module. Display should now be "n.c." (connected).

NOTE: To properly identify your trailer during pairing, the 1-Way trailer plug must be disconnected from the Power Module.

Display Readings after Connecting the Prodigy RF
Once the units are connected and successfully paired, you should see the following on the two digit display:

- Initial Power to the Hand Held, without pairing or Power Module not powered on
- Paired, but Trailer is not connected to Power Module.

- Power to the Prodigy RF with a disconnected unit. Features not engaged.

- Manual Override activated without trailer connected.

- Manual Override activated (with trailer), 5.4 denotes a hypothetical power output. This value is set using the power knob. Range is 0.0 to 1.0 volts. This is an indication of vehicle output to electric brakes.

- Display will be blank during power saving mode (no function or braking activity for at least 2 hours)
