Evolvable Systems: From Biology to Hardware Gianluca Tempesti, Andy Tyrrell, Julian F. Miller, 2010-09-07 Biology has inspired electronics from the very beginning the machines that we now call computers are deeply rooted in biological metaphors Pioneers such as Alan Turing and John von Neumann openly declared their aim of creating artificial machines that could mimic some of the behaviors exhibited by natural organisms Unfortunately technology had not progressed enough to allow them to put their ideas into practice The 1990s saw the introduction of programmable devices both digital FPGAs and analogue FPAs These devices by allowing the functionality and the structure of electronic devices to be easily altered enabled researchers to endow circuits with some of the same versatility exhibited by biological entities and sparked a renaissance in the field of bio inspired electronics with the birth of what is generally known as evolvable hardware Ever since the field has progressed along with the technological improvements and has expanded to take into account many different biological processes from evolution to learning from development to healing Of course the application of these processes to electronic devices is not always straightforward to say the least but rather than being discouraged researchers in the community have shown remarkable ingenuity as demonstrated by the variety of approaches presented at this conference and
