## Unit – I

**Trial (or) Random Experiment :** Consider an experiment which, though repeated any number of times under essentially identical conditions, does not give unique results but may result in any one of the several possible outcomes. These experiments are called as a Trial (or) Random Experiment. And the outcomes are known as Events.

**Example:** 1. Throwing a die is a trial & getting result (1 or 2 or 3 or 4 or 5 or 6) is an event.  
2. Tossing a coin is a trial & getting result head or tail is an event.

**Sample Space :** The total number of possible outcomes in any trial is known as Sample space (or) Exhaustive Events & it is denoted by 'S'.

**Example:** 1. In tossing a coin, there are two exhaustive cases that are head & tail.  
2. In throwing of a Die, there are six exhaustive cases. Since any one of the 6 faces 1, 2, 3, 4, 5, 6 may come on upper face.  
3. In drawing two cards from a pack of 52 cards, the exhaustive number of cases is  ${}^{52}C_2$ .  
4. In throwing of two dice, the exhaustive number of cases is  $6^2 = 36$   
5. In throwing of 'n' dice, the exhaustive number of cases is  $6^n$

**Note :** 1. An event  $E_1 = S$ , then the event  $E_1$  is called as Sure (or) Certain Event.  
2. If  $E_2 = \Phi$ , then the event  $E_2$  is called as Impossible event.

**Equally likely events :** Outcomes of a trial are said to be equally likely if there is no reason to expect one of them in preference to others.

**Example :** 1. In tossing an un-biased coin, the two possible cases head or tail are equally likely events.  
2. In throwing an un-biased die, all the six faces are equally likely events.

**Mutually Exclusive Events :** Events are said to be mutually exclusive or incompatible if the happening of any one of them precludes the happening of all others.  
i.e., If no two or more of them can happen simultaneously in the same trial.

**Example :** 1. In tossing a coin the events Head & tail are mutually exclusive.  
2. In throwing a die all 6 possible cases are mutually exclusive.

**Note :** If two events are mutually exclusive, then the sets are disjoint.  
i.e., Let A & B are two non-empty sets are said to be mutually exclusive if  $A \cap B = \Phi$

**Favorable Events :** The number of cases favorable to an event in a trial is the number of outcomes which entail the happening of the event.

**Example:** 1. In throwing of two dice, The number of favorable cases for getting the sum of the results of the two dice 5 is 4. { (1,4), (4,1), (2,3), (3,2) }  
2. In drawing a card from a pack of 52 cards,  
The number of favorable cases for drawing an Ace is 4.  
The number of favorable cases for drawing a spade is 13.  
The number of favorable cases for drawing a red card is 26.

**Classical (or Mathematical) Definition of Probability :**

If a trial results in 'n' exhaustive, mutually exclusive & equally likely cases and 'm' of them are favorable to happening of an event E, then the Probability of occurrence of event E is denoted by P(E) & is defined as

 discrete and probabilistic and neural networks are embedded in spontaneous background activity The mathematical and  
 computational tool sets contributing to our understanding of stochastic neural dynamics have expanded rapidly in recent  
 years New theories have emerged detailing the dynamics and computational power of the balanced state in recurrent  
 networks At the cellular level novel stochastic extensions to the classical Hodgkin Huxley model have enlarged our  
 understanding of neuronal dynamics and action potential initiation Analytical methods have been developed that allow for the  
 calculation of the firing statistics of simplified phenomenological integrate and fire models taking into account adaptation

 sources and mechanisms By internal we mean variability that is generated by intrinsic biophysical processes This includes  
 noise at a range of scales from ion channels to synapses to neurons to networks The contributions in this Research Topic  
 introduce innovative mathematical analysis and or computational methods that relate to empirical measures of neural activity  
 and illuminate the functional role of intrinsic noise in the brain
