This is the first comprehensive monograph to thoroughly investigate constant width bodies which is a classic area of interest within convex geometry. It examines bodies of constant width from several points of view and in doing so shows surprising connections between various areas of mathematics. Concise explanations and detailed proofs demonstrate the many interesting properties and applications of these bodies. Numerous instructive diagrams are provided throughout to illustrate these concepts. An introduction to convexity theory is first provided and the basic properties of constant width bodies are then presented. The book then delves into a number of related topics which include Constant width bodies in convexity sections and projections complete and reduced sets mixed volumes and further partial fields Sets of constant width in non Euclidean geometries in real Banach spaces and in hyperbolic spherical and further non Euclidean spaces The concept of constant width in analysis using Fourier series spherical integration and other related methods Sets of constant width in differential geometry using systems of lines and discussing notions like curvature evolutes etc Bodies of constant width in topology hyperspaces transnormal manifolds fiber bundles and related topics The notion of constant width in discrete geometry referring to geometric inequalities packings and coverings etc Technical applications such as film projectors the square hole drill and rotary engines Bodies of Constant Width An Introduction to Convex Geometry with Applications will be a valuable resource for graduate and advanced undergraduate students studying convex geometry and related fields. Additionally it will appeal to any mathematicians with a general interest in geometry Vision, Modeling, and Visualization

2002 Günther Greiner, 2002 **The Latest and Best of TESS**, 1991 **Large-Scale Studies in Mathematics**

Education James A. Middleton, Jinfa Cai, Stephen Hwang, 2015-05-05 In recent years funding agencies like the Institute of Educational Sciences and the National Science Foundation have increasingly emphasized large scale studies with experimental and quasi experimental designs looking for objective truths. Educational researchers have recently begun to use large scale studies to understand what really works from developing interventions to validation studies of the intervention and then to efficacy studies and the final scale up for large implementation of an intervention. Moreover modeling student learning developmentally taking into account cohort factors issues of socioeconomics local political context and the presence or absence of interventions requires the use of large data sets wherein these variables can be sampled adequately and inferences made. Inroads in quantitative methods have been made in the psychometric and sociometric literatures but these methods are not yet common knowledge in the mathematics education community. In fact currently there is no volume

devoted to discussion of issues related to large scale studies and to report findings from them This volume is unique as it directly discusses methodological issue in large scale studies and reports empirical data from large scale studies

Steele,Craig Huhn,2018-03-01 Over the past thirty years Holt High School in central Michigan has engaged in a quiet revolution that has transformed mathematics teaching and learning in the district From its roots as a rural high school housed in a single building in the 1980s the high school mathematics staff has grown an innovative meaningful high school mathematics curriculum that sees nearly every student in the district completing the equivalent of Precalculus Tracking was dropped in favor of an evolving suite of supports designed to promote student success in unifying rather than segregating ways Mathematics classrooms in Holt are discourse rich environments where teachers and students explore meaningful uses for mathematics as they reason and problem solve together This transformation took place and persists amidst changing

professional partnerships shifting district demographics increasing accountability measures at the state and national level and turnover in teaching staff and district leadership In this book we explore the case of Holt High School through an exploration of how the mathematics curriculum has shifted over the past thirty years and the conditions and supports that have been put in place in the district to make this work fruitful and sustainable The story includes successes failures celebrations and challenges as we chronicle Holt's high school mathematics evolution Guiding questions protocols and reflective activities are provided for teachers and district leaders to begin the challenging conversations in their own district that lead to meaningful change

Animal Mind — Human Mind D. R. Griffin, 2012-12-06 the oleic acid on a live and wriggling sister or mother and refrain from evicting her from our hive But does the occurrence of unintelligent behavior suffice to demonstrate the total absence of mental experience under any circumstances Ethologists from some distant galaxy could easily discern examples of stupid and maladaptive behavior in our own species But do instances of human stupidity prove that none of us is ever consciously aware of what he is doing No available evidence compels us to believe that insects or any other animals experience any sort of consciousness or intentionally plan any of their behavior But neither are we compelled to believe the contrary In areas where data are few and of limited relevance dogmatic negativity can easily limit what scientists even try to investigate and thus perhaps delay or prevent important insights and discoveries Many of the participants agreed that a good starting point would be to consider what we know of our own thinking subjective feelings and consciousness and then move on to inquire whether other species experience anything similar Such an approach was once considered fallaciously anthropomorphic But it seems now to be widely if not universally recognized that this is a serious objection only if one has already assumed in advance that conscious thinking is uniquely human and the accusation of anthropomorphism is then merely a reiteration of the prior conviction
