The following program demonstrates the use of #define and const --

```
#include-lostreas-
using namespace std;
#defice FI 3.142
comet int MAX-5;
int main [ ]

| float radius, area;
| cout<="Enter the radius :";
| cin>> radius;
| area-FI*radius*radius;
| cout<="Area of the circle ="==area es=\n=;
| cout<="Area of the circle ="==area es=\n=;
| cout<="Command the circle ="==area es=\n=;
| cout<="Command the circle ="==area es=\n=;
| FI=3; //Invalid | // FI=3; //Envalid | // FAX=10; // FI=3; //Envalid | // FIAX=10; // FI=0; //Envalid | // FIAX=10; // FICOT: eseignment of read-only variable *MAX*
```

In the above program the statement

oren = PI * raction * raction;
is translated by the preprocessor as

oren = 3.142 * raction * raction;
and calculated result is stored in the variable 'area' which is displayed in the next statement.

MAX variable contains the constant value 5 and same is displayed.

The enum keyword: It is explained earlier in the user-defined data type section.

Operators

An operator is a symbol that tells the compiler to perform specific mathematical or logical manipulations. All C operators are valid in C++. The detailed description is provided in separate document for C operators for case of reading. All the codes should be experimented by students using C++ syntax. Following operators other than >> and << are available in C++:

11	Scope resolution operator
11.	Pointer-to-member declarator
- 3- th	Pointer-to-member operator
	Pointer-to-member operator
delete	Memory release operator
end1	Line feed operator
mew	Memory allocation operator
netw	Field width operator

Types author.

Typecasting is the concept of converting the value of one type into another type. For example, you might have a float that you need to use in a function that requires an integer.

Implicit conversion: Almost every compiler makes use of what is called automatic
typecasting, it automatically converts one type into another type. If the compiler converts a
type it will normally give a warning. For example this warning, conversion from 'double' to
'int', possible loss of data. The problem with this is, that you get a warning foormally you.
