Reading Machines Toward An Algorithmic Criticism Stephen Ramsay:

Reading Machines Stephen Ramsay, 2011-11-30 Besides familiar and now commonplace tasks that computers do all the time what else are they capable of Stephen Ramsay's intriguing study of computational text analysis examines how computers can be used as reading machines to open up entirely new possibilities for literary critics Computer based text analysis has been employed for the past several decades as a way of searching collating and indexing texts Despite this the digital revolution has not penetrated the core activity of literary studies interpretive analysis of written texts Computers can handle vast amounts of data allowing for the comparison of texts in ways that were previously too overwhelming for individuals but they may also assist in enhancing the entirely necessary role of subjectivity in critical interpretation Reading Machines discusses the importance of this new form of text analysis conducted with the assistance of computers Ramsay suggests that the rigidity of computation can be enlisted in the project of intuition subjectivity and play **Ethics of the**

Algorithm Todd Presner, 2024-09-24 How computational methods can expand how we see read and listen to Holocaust testimony The Holocaust is one of the most documented and now digitized events in human history Institutions and archives hold hundreds of thousands of hours of audio and video testimony composed of more than a billion words in dozens of languages with millions of pieces of descriptive metadata It would take several lifetimes to engage with these testimonies one at a time Computational methods could be used to analyze an entire archive but what are the ethical implications of listening to Holocaust testimonies by means of an algorithm In this book Todd Presner explores how the digital humanities can provide both new insights and humanizing perspectives for Holocaust memory and history Presner suggests that it is possible to develop an ethics of the algorithm that mediates between the ethical demands of listening to individual testimonies and the interpretative possibilities of computational methods He delves into thousands of testimonies and witness accounts focusing on the analysis of trauma language voice genre and the archive itself Tracing the affordances of digital tools that range from early proto computational approaches to more recent uses of automatic speech recognition and natural language processing Presner introduces readers to what may be the ultimate expression of these methods AI driven testimonies that use machine learning to process responses to questions offering a user experience that seems to replicate an actual conversation with a Holocaust survivor With Ethics of the Algorithm Presner presents a digital humanities argument for how big data models and computational methods can be used to preserve and perpetuate cultural memory William Blake and the Digital

Humanities Roger Whitson, Jason Whittaker, 2013-01-04 William Blake's work demonstrates two tendencies that are central to social media collaboration and participation Not only does Blake cite and adapt the work of earlier authors and visual artists but contemporary authors musicians and filmmakers feel compelled to use Blake in their own creative acts This book identifies and examines Blake's work as a social and participatory network a phenomenon described as zoamorphosis which encourages even demands that others take up Blake's creative mission The authors reexamine the history of the digital

humanities in relation to the study and dissemination of Blake's work from alternatives to traditional forms of archiving embodied by Blake's citation on Twitter and Blakean remixes on YouTube smart mobs using Blake's name as an inspiration to protest the 2004 Republican National Convention and students crowdsourcing reading and instruction in digital classrooms to better understand and participate in Blake's world The book also includes a consideration of Blakean motifs that have created artistic networks in music literature and film in the twentieth and the twenty first centuries showing how Blake is an ideal exemplar for understanding creativity in the digital age

Latin American Digital Poetics Scott Weintraub, Luis Correa-Díaz, 2023-09-23 Latin American Digital Poetics seeks to take the pulse of emergent poetic forms whose history is entangled with the computational and its AI dreams and achievements This study carefully and thoroughly probes the intersection between the literary the cultural and the scientific technological in order to reflect on the ways that digital technology has radically reshaped and reconfigured nearly all aspects of contemporary culture The main idea of this book then is simple by way of panoramic approaches to digital poetry as well as select case studies we seek to account for the multi directional exchange between poetry technology and culture via a primarily pedagogical approach

Critical Digital

Humanities James E Dobson, 2019-03-16 Can established humanities methods coexist with computational thinking It is one of the major questions in humanities research today as scholars increasingly adopt sophisticated data science for their work James E Dobson explores the opportunities and complications faced by humanists in this new era Though the study and interpretation of texts alongside sophisticated computational tools can serve scholarship these methods cannot replace existing frameworks As Dobson shows ideas of scientific validity cannot easily nor should be adapted for humanities research because digital humanities unlike science lack a leading edge horizon charting the frontiers of inquiry Instead the methods of digital humanities require a constant rereading At the same time suspicious and critical readings of digital methodologies make it unwise for scholars to defer to computational methods Humanists must examine the tools including the assumptions that went into the codes and algorithms and questions surrounding their own use of digital technology in research Insightful and forward thinking Critical Digital Humanities lays out a new path of humanistic inquiry that merges critical theory and computational science

Research Methods for the Digital Humanities lewis levenberg, Tai Neilson, David Rheams, 2018-11-04 This volume introduces the reader to the wide range of methods that digital humanities employ and offers a practical guide to the study interpretation and presentation of cultural material and practices In this instance the editors consider digital humanities to include both the use of computing to understand cultural material in new ways and the application of theories and methods from the humanities to interpret new technologies Each chapter provides a step by step guide to cutting edge methodologies so that students can make informed decisions about the methods they use consider ethical practices follow practical procedures and present their work effectively Readers will develop practical and reflexive understandings of the software and digital devices that they study and use for research and the book will help new researchers collaborate and contribute to their scholarly communities and to public discourse As contemporary humanities work becomes increasingly interdisciplinary and increasingly permeated by and with digital technologies this volume helps new researchers navigate an evolving academic environment Humanities and social sciences students will find this textbook an invaluable resource for assessing and creating digital projects

Debates in the Digital Humanities 2016 Matthew K. Gold, Lauren F. Klein, 2016-05-18 Pairing full length scholarly essays with shorter pieces drawn from scholarly blogs and conference presentations as well as commissioned interviews and position statements Debates in the Digital Humanities 2016 reveals a dynamic view of a field in negotiation with its identity methods and reach Pieces in the book explore how DH can and must change in response to social justice movements and events like Ferguson how DH alters and is altered by community college classrooms and how scholars applying DH approaches to feminist studies queer studies and black studies might reframe the commitments of DH analysts Numerous contributors examine the movement of interdisciplinary DH work into areas such as history art history and archaeology and a special forum on large scale text mining brings together position statements on a fast growing area of DH research In the multivalent aspects of its arguments progressing across a range of

platforms and environments Debates in the Digital Humanities 2016 offers a vision of DH as an expanded field new possibilities differently structured Published simultaneously in print e book and interactive webtext formats each DH annual will be a book length publication highlighting the particular debates that have shaped the discipline in a given year By identifying key issues as they unfold and by providing a hybrid model of open access publication these volumes and the Debates in the Digital Humanities series will articulate the present contours of the field and help forge its future

Theory in the "Post" Era Christian Moraru, Andrei Terian, Alexandru Matei, 2021-08-26 Shortlisted for the AATSEEL 2022 Award for Best Edited Multi Author Scholarly Volume AATSEEL is The American Association of Teachers of Slavic and East European Languages Theory in the Post Era brings together the work and perspectives of a group of Romanian theorists who discuss the morphings of contemporary theory in what the editors call the post era Since the Cold War s end and especially in the third millennium theorists have been exploring the aftermath and sometimes just the after of whole paradigms the crisis or passing of anthropocentrism the twilight of an entire ontological and cultural condition as well as the corresponding rise of an antagonist model of an anti meta or neo alternative with examples ranging from posthumanism and post postmodernism to post aesthetics postanalog interpretation or digicriticism post presentism post memory post or neo critique and so forth It

is no coincidence the contributors to this volume argue that this post moment is also a time when theory is practiced as a world genre If theory has always been a worlded enterprise a quintessentially communal cross cultural and international project this is truer at present than ever Perhaps more than other humanist constituencies today s theorists work and belong in a theory commons that is transnational if still uneven economically politically and otherwise Theory in the Post Era reports the results of Romanian theory experiments that join efforts made in other places to foster a theory for the post age **The New Pynchon Studies** Joanna Freer,2019-05-09 The essays in this collection are at the forefront of Pynchon studies representing distinctively twenty first century approaches to his work Romanticism and the Contingent Self Michael Falk,2024-05-23 This book offers a new critique of selfhood in Romantic literature In the past Romanticism has been seen as an individualistic movement with writers believing in the centrality of the self Challenging this prevailing view of Romanticism and the modern self this study unveils an alternative tradition of Romantic writing in which the self is fragile degenerate non existent or in a word contingent It combines philosophy intellectual history literary studies and digital humanities and takes a transnational approach both in its coverage of philosophical thought and literature including case studies from England Ireland Scotland and colonial Australia with examples from American and European works as well The book also uses innovative digital techniques such as text analysis sentiment mining and network analysis to enrich the exploration of text and context It covers all major genres of Romantic writing fiction realist novels poetry the sonnet non fiction prose biography and drama gothic tragedy Providing a new framework for understanding the contingent self this book is of interest to scholars and students of Romantic literature philosophy of the self and digital humanities Digital History and Hermeneutics Andreas Fickers,Juliane Tatarinov,2022-06-21 As a result of rapid advancements in computer science during recent decades there has been an increased use of digital tools methodologies and sources in the field of digital humanities While opening up new opportunities for scholarship many digital methods and tools now used for humanities research have nevertheless been developed by computer or data sciences and thus require a critical understanding of their mode of operation and functionality The novel field of digital hermeneutics is meant to provide such a critical and reflexive frame for digital humanities research by acquiring digital literacy and skills A new knowledge for the assessment of digital data research infrastructures analytical tools and interpretative methods is needed providing the humanities scholar with the necessary munition for doing critical research The Doctoral Training Unit Digital History and Hermeneutics at the University of Luxembourg applies this analytical frame to 13 PhD projects By combining a hermeneutic reflection on the new digital practices of humanities scholarship with hands on experimentation with digital tools and methods new approaches and opportunities as well as limitations and flaws can be addressed Digital Milton David Currell,Islam Issa,2018-08-23 Digital Milton is the first volume to investigate John Milton in terms of our digital present It explores the digital environments Milton now inhabits as well as the diverse digital methods that inform how we read teach edit and analyze his works Some chapters

use innovative techniques such as processing metadata from vast archives of early modern prose coding Milton's geographical references on maps and visualizing debt networks from literature and from life. Other chapters discuss the technologies and platforms shaping how literature reaches us today from audiobooks to eReaders from the OED Online to Wikipedia and from Twitter to YouTube. Digital Milton is the first say on a topic that will become ever more important to scholars, students and teachers of early modern literature in the years to come.

The Digital Humanities and Literary Studies Martin Paul Eve, 2022. A short introduction and overview of developing intersections between digital methods and literary studies that offers the best starting place for those who wish to learn more about the possibilities but also the limitations of the digital humanities in the literary space.

Overwhelmed Maurice S. Lee, 2024-06-04. This book looks at how debates over the fate of literature in our digital age are powerfully conditioned by the nineteenth century's information revolution. It explains what happens to literature during an information revolution and how readers and writers adapt to proliferating data and texts both today and in the nineteenth century. Explores four key areas: reading, searching, counting and testing, and analyzes diverse writings from canonical works to lesser known texts.

Literature in the Digital Age Adam Hammond, 2016-03-03. Literature in a Digital Age: An Introduction guides readers through the most salient theoretical, interpretive and creative possibilities opened up by the shift to digital literary forms such as e-books, digital archives and electronic literature. While Digital Humanities (DH) has been hailed as the next big thing in literary studies, many students and scholars remain perplexed as to what a DH approach to literature entails and skeptical observers continue to see literature and the digital world as fundamentally incompatible. In its argument that digital and traditional scholarship should be placed in dialogue with each other, this book contextualizes the advent of the digital in literary theory, explores the new questions readers can ask of texts when they become digitized and investigates the challenges that fresh forms of born digital fiction pose to existing models of literary analysis.

Distant Readings Matt Erlin, Lynne Tatlock, 2014. Explores the concept of distant reading and its application to the analysis of nineteenth century German literature and culture, drawing on a range of approaches from the emerging digital humanities field. In nineteenth century Germany, breakthroughs in printing technology and an increasingly literate populace led to an unprecedented print production boom that has long presented scholars with a challenge: how to read it all. This anthology seeks new answers to the scholarly quandary of the abundance of text. Responding to Franco Moretti's call for distant reading and modeling a range of innovative approaches to literary historical analysis informed by the burgeoning field of digital humanities, it asks what happens when we shift our focus from the one to the many, from the work to the network. The thirteen essays in this volume explore the evolving concept of distant reading and its application to the analysis of German literature and culture in the long nineteenth century. The contributors consider how new digital technologies enable both the testing of hypotheses and the discovery of patterns and trends as well as how distant and traditional close reading can complement each other in hybrid models of analysis that maintain careful

attention to detail but also make calculation enumeration and empirical description critical elements of interpretation

Uncomputable Alexander Galloway, 2021-11-02 A journey through the uncomputable remains of computer history Narrating some lesser known episodes from the deep history of digital machines Alexander R Galloway explains the technology that drives the world today and the fascinating people who brought these machines to life With an eye to both the computable and the uncomputable Galloway shows how computation emerges or fails to emerge how the digital thrives but also atrophies how networks interconnect while also fray and fall apart By re building obsolete technology using today's software the past comes to light in new ways from intricate algebraic patterns woven on a hand loom to striking artificial life simulations to war games and back boxes A description of the past this book is also an assessment of all that remains uncomputable as we continue to live in the aftermath of the long digital age
