

Sectors – ARC LENGTH Example 2

L = Length of Arc around Pizza

We only have 300° out of the full 360° of the circle.

This fraction is 300 / 360

The large remaining part of this circle is called a "MAJOR Sector".

All the way around a Circle is the "Circumference" of

$$C = \pi \times R \times 2 \quad \text{where } \pi = 3.1416$$

$$L = 300 / 360 \text{ of a full circle}$$

$$L = 300/360 \times (\pi \times R \times 2)$$

$$L = 0.8333 \times (3.1416 \times 10 \times 2)$$

$$L = 52.4 \text{ cm} \quad \checkmark$$

those in different workplaces e.g. those of educators, designers, construction engineers, museum curators and in different fields of academic endeavour e.g. history, archaeology, mathematics, economics. From an educational perspective, researching the development of competency in real world modelling involves research situated in crossing the boundaries between being a student engaged in modelling or mathematical application to real word tasks in the classroom, being a teacher of mathematical modelling in or outside the classroom or bridging both and being a modeller of the world outside the classroom. This is the focus of many of the authors of the chapters in this book. All authors of this volume are members of the International Community of Teachers of Mathematical Modelling (ICTMA), the peak research body into researching the teaching and learning of mathematical modelling at all levels of education from the early years to tertiary education as well as in the workplace.
