Soft Computing in Green and Renewable Energy Systems Kasthurirangan Gopalakrishnan, Siddhartha Kumar Khaitan, Soteris Kalogirou, 2011-08-20

Soft Computing in Green and Renewable Energy Systems provides a practical introduction to the application of soft computing techniques and hybrid intelligent systems for designing modeling characterizing optimizing forecasting and performance prediction of green and renewable energy systems

Research is proceeding at jet speed on renewable energy energy derived from natural resources such as sunlight wind tides rain geothermal heat biomass hydrogen etc as policy makers researchers economists and world agencies have joined forces in finding alternative sustainable energy solutions to current critical environmental economic and social issues

The innovative models environmentally benign processes data analytics etc employed in renewable energy systems are computationally intensive non linear and complex as well as involve a high degree of uncertainty

Soft computing technologies such as fuzzy sets and systems neural science and systems evolutionary algorithms and genetic programming and machine learning are ideal in handling the noise imprecision and uncertainty in the data and yet achieve robust low cost solutions

As a result intelligent and soft computing paradigms are finding increasing applications in the study of renewable energy systems

Researchers practitioners undergraduate and graduate students engaged in the study of renewable energy systems will find
