These experimental conditions in the *in vitro* system were used to study the effect of the concentration of the substrate on the rate of the reaction. The results are shown in Figure 1. The rate of the reaction increases with the concentration of the substrate and reaches a maximum at a concentration of 0.01 M. Above this concentration, the rate of the reaction decreases. This is due to the fact that the enzyme is saturated with the substrate and the reaction is limited by the concentration of the enzyme.
