concerned parents **Focus on physical science** Charles H. Heimler,1989 The Concept of Probability E.I.

Bitsakis,Efthymios Nicolaidis,1989-03-31 This volume contains articles from invited speakers at a meeting which took place in Delphi during the week of October 12 16 1987 The theme of the meeting was The concept of probability and was organized by the Group of Interdisciplinary Research Physics Department University of Athens and the Theoretical and Physical Chemistry Institute of the National Hellenic Research Foundation Athens The Group of Interdisciplinary Research organized two previous Meetings 1 on the Concept of physical reality 1982 and 2 on the question of determinism in Physics 1984 This small gathering which was attended by scientists mathematicians and philosophers from more than 22 countries took place on the occasion of the 100th year from the birthday of E Schrodinger As the father of wave mechanics Schrodinger thrust us into an era of physics where knowledge of the IV function is considered for most situations as the ultimate aim and the ultimate truth Yet he as well as another towering figure of 20th century physics A Einstein never really felt comfortable with the interpretation of the meaning of IV and of the information that it contains With Einstein playing the leading role a debate about concepts and interpretation started as soon as quantum mechanics was born Central theme to this debate is the concept of probability a concept which permeates explicitly or implicitly all science and even our decision making in everyday life The articles cover a broad spectrum of thought and results mathematical physical epistemological experimental specific general many of them outside the accepted norm

Teaching and Learning in History Ola Hallden,2012-10-12 Research on history instruction and learning is emerging as an exciting new field of inquiry The editors prepared this volume because the field is at an important moment in its development a stage where there is research of sufficient depth and breadth to warrant a collection of representative pieces The field of research on history teaching and learning connects with both traditional research on social studies and with recent cognitive analyses of domains such as mathematics and physics However the newer research goes beyond these activities as well Where traditional research approaches to social studies instruction and learning have focused on curriculum they have avoided the study of purely disciplinary features the textual components of history and the concomitant demands as well as the nature of various learners Where recent cognitive analyses of mathematics and physics have dealt with misconceptions and knowledge construction they have avoided topics such as perspective taking interpretation and rhetorical layerings The new work by contrast has been concerned with these issues as well as the careful analyses of the nature of historical tasks and the nature of disciplinary and instructional explanations The lines of research presented in these chapters are both compelling and diverse and include a range of topical questions such as What affects the quality of teaching How are historical documents interpreted in the writing of history How is history explained What are the classroom demands on an elementary school social studies teacher What does text accomplish or fail to accomplish in educational settings How do teachers think about particular topics for history teaching Although much of the research reflects a grounding in or the influence of cognitive psychology not all of it derives from that

tradition Traditions of rhetoric curriculum analysis and developmental psychology are also woven throughout the chapters The editors envision this volume as a contribution to educational research in a subject matter and as a tool for practitioners concerned with the improvement of instruction in history They also anticipate that it will contribute to cognitive science
