Astronomy and Astrophysics Abstracts aims to present a comprehensive documentation of the literature concerning all aspects of astronomy, astrophysics, and their border fields. It is devoted to the recording, summarizing, and indexing of the relevant publications throughout the world. Astronomy and Astrophysics Abstracts is prepared by a special department of the Astronomisches Rechen Institut under the auspices of the International Astronomical Union. Volume 43 records literature published in 1987 and received before August 15, 1987. Some older documents, which we received late and which are not surveyed in earlier volumes, are included too. We acknowledge with thanks contributions of our colleagues all over the world. We also express our gratitude to all organizations, observatories, and publishers which provide us with complimentary copies of their publications. Starting with Volume 33, all the recording, correction, and data processing work was done by means of computers. The recording was done by our technical staff members: Ms Helga Ballmann, Ms Beate Gobel, Ms Monika Kohl, Ms Sylvia Matyssek, Ms Doris Schmitz, Braunstein, Ms Utta Barbara Stegemann, Mr Jochen Heidt, and Mr Kristopher Polzine supported our task by careful proof reading. It is a pleasure to thank them all for their encouragement. Heidelberg, October 1987. The Editors' Contents: Introduction, 1. Concordance Relation, PHYS AAA, 3. Abbreviations, 5. Books. *Toward a Safer and More Secure Cyberspace*. National Academy of Engineering, National Research Council, Division on Engineering and Physical Sciences, Computer Science and Telecommunications Board, Committee on Improving Cybersecurity Research in the United States, 2007-11-24. Given the growing importance of cyberspace to nearly all aspects of national life, a secure cyberspace is vitally important to the nation, but cyberspace is far from secure today. The United States faces the real risk that adversaries will exploit vulnerabilities in the nation's critical information systems, thereby causing considerable suffering and damage. Online e-commerce, business, government agency files, and identity records are all potential security targets. *Toward a Safer and More Secure Cyberspace* examines these Internet security vulnerabilities and offers a strategy for future research aimed at countering cyber attacks. It also explores the nature of online threats and some of the reasons why past research for improving cybersecurity has had less impact than anticipated and considers the human resource base needed to advance the cybersecurity research agenda.

This book will be an invaluable resource for Internet security professionals information technologists policy makers data stewards e commerce providers consumer protection advocates and others interested in digital security and safety
