Hipólito,Andy Clark,2023-12-08 Even before the deep learning revolution the landscape of artificial intelligence AI was
already changing drastically in the 90s Embodied intelligence it was proposed must play a crucial role in the design of
intelligent machines This new wave was inspired by what is today known as Embodied and Enactive Cognitive Science or E
Cognition which considers that cognitive activity does not reduce to the intellectual capacities of agents being able to
represent their environments E cognition set AI and robotics in a new direction in which intelligent machines are required to
interact with the environment and where this interaction does not reduce to explicit representations or prespecified
algorithms These ideas revolutionized the way we think about intelligent machines and cognition but these theoretical
advances are only partially reflected in modern approaches to AI and machine learning ML Despite deeply impressive
achievements AI ML still struggles to recapitulate the kinds of intelligence we find in natural systems whether we are
considering individual insects e g simultaneous localization and mapping or swarm behaviour e g foraging sensing and
ensemble inferences and especially the kinds of flexibility and high level reasoning characteristic of human cognition
