$$f(x) = 3x^4 - x^3 + 2x^2 - 7$$

The diagram shows the polynomial function $f(x) = 3x^4 - x^3 + 2x^2 - 7$ with several annotations. A green circle encloses the first term, $3x^4$, with a green arrow pointing to it from the label 'leading term'. A purple arrow points to the exponent '4' in x^4 from the label 'degree of the function'. A red arrow points to the coefficient '3' from the label 'leading coefficient'. An orange circle encloses the constant term '-7', with an orange arrow pointing to it from the label 'y-intercept (0, -7)'.

Primarily a textbook to prepare Sixth Form students for public examinations in Hong Kong this book is also useful as a reference for undergraduate students since it contains some advanced theory of equations beyond the sixth form level

Polynomial Approximation of Differential Equations Daniele Funaro,1992-04-22 This book is devoted to the analysis of approximate solution techniques for differential equations based on classical orthogonal polynomials These techniques are popularly known as spectral methods In the last few decades there has been a growing interest in this subject As a matter of fact spectral methods provide a competitive alternative to other standard approximation techniques for a large variety of problems Initial applications were concerned with the investigation of periodic solutions of boundary value problems using trigonometric polynomials Subsequently the analysis was extended to algebraic polynomials Expansions in orthogonal basis functions were preferred due to their high accuracy and flexibility in computations The aim of this book is to present a preliminary mathematical background for beginners who wish to study and perform numerical experiments or who wish to improve their skill in order to tackle more specific applications In addition it furnishes a comprehensive collection of basic formulas and theorems that are useful for implementations at any level of complexity We tried to maintain an elementary exposition so that no experience in functional analysis is required *Polynomial functions on $O(0|0|0)$* . Polynomial 11 **Graph Polynomials and Set Functions Index** **Complex Polynomials** T. Sheil-Small,2002-11-07 This book studies the geometric theory of polynomials and rational functions in the plane Any theory in the plane should make full use of the complex numbers and thus the early chapters build the foundations of complex variable theory melding together ideas from algebra topology and analysis In fact throughout the book the author introduces a variety of ideas and constructs theories around them incorporating much of the classical theory of polynomials as he proceeds These ideas are used to study a number of unsolved problems bearing in mind that such problems indicate the current limitations of our knowledge and present challenges for the future However theories also lead to solutions of some problems and several such solutions are given including a comprehensive account of the geometric convolution theory This is an ideal reference for graduate students and researchers working in this area *Polynomials and Polynomial Functions* Feng-Kuo Huang,2000 *Polynomial Functions* Geoffrey A.
