Emerging Technologies for Nutrition Research Institute of Medicine, Committee on Military Nutrition Research, 1997-10-03 The latest of a series of publications based on workshops sponsored by the Committee on Military Nutrition Research this book's focus on emerging technologies for nutrition research arose from a concern among scientists at the U S Army Research Institute of Environmental Medicine that traditional nutrition research using standard techniques centered more on complex issues of the maintenance or enhancement of performance and might not be sufficiently substantive either to measure changes in performance or to predict the effects on performance of stresses soldiers commonly experience in operational environments The committee's task was to identify and evaluate new technologies to determine whether they could help resolve important issues in military nutrition research The

book contains the committee's summary and recommendations as well as individually authored chapters based on presentations at a 1995 workshop. Other chapters cover techniques of body composition assessment, tracer techniques for the study of metabolism, ambulatory techniques for the determination of energy expenditure, molecular and cellular approaches to nutrition, the assessment of immune function, and functional and behavioral measures of nutritional status.

Equipment for Respiratory Care Teresa A. Volsko, Robert L. Chatburn, Mohamad F. El-Khatib, 2020-11-24

Equipment for Respiratory Care Second Edition continues to break the archetype of equipment texts. This text uniquely focuses on the principles of the equipment in a practical, clinically relevant manner.

Mosby's Respiratory Care Equipment Jimmy M. Cairo, Susan P. Pilbeam, 1999

The leading resource for more than two decades, this new edition of MOSBY'S RESPIRATORY CARE EQUIPMENT, formerly authored by Stephen P. McPherson, features a new, in-depth, clinically oriented focus with thorough explanations of how equipment is used by respiratory care practitioners. New chapters include noninvasive assessment of physiologic functioning, blood gas analysis, principles of infection control, and sleep diagnostics. In addition, new content covers incentive spirometry, IPPB devices, and chest physiotherapy. Features like the how-to focus of the mechanical ventilator discussion, Clinical Practical Guideline excerpts, Decision Making and Problem Solving boxes, and internet resources set this book apart from the rest. The new art, a new focus, new features, and a new author team make this the most sought-after edition ever. Over 650 300 new line drawings and photographs to help students learn faster and easier. Full-page line drawings of ventilator control panels allow for easy identification of controls. Review questions at the end of each chapter include multiple-choice questions modeled after those on the NBRC exam, as well as critical thinking questions to prepare the student to practice as a Respiratory Therapist. All key terms are listed in a glossary at the end of the book to help students learn easier.
