Pathologies of Motion Kevis Goodman,2022-12-27 An original study of late Enlightenment aesthetics poetics and environmental medicine as overlapping ways of comprehending the dislocations of historical existence lodged in the movements of bodies and minds This book studies later eighteenth century medicine aesthetics and poetics as overlapping forms of knowledge increasingly concerned about the relationship between the geographical movements of persons displaced from home and the physiological or

nervous motions within their bodies and minds Looking beyond familiar narratives about medicine and art s shared therapeutic and harmonizing ideals this book explores Enlightenment and Romantic era aesthetics and poetics in relation to a central but less well known area of eighteenth century environmental medicine pathology No mere system of diagnosis or classification philosophical pathology was an art of interpretation offering sophisticated ways of reading the multiple conditions and causes of disease however absent from perception in their palpable embodied effects For medical anthropological environmental and literary authors alike it helped to locate the dislocations of modern mobility when a full view of their causes and conditions remained imperfectly understood or still unfolding Goodman traces the surprising afterlife of the period s exemplary but unexplained pathology of motion medical nostalgia within aesthetic theory and poetics arguing that nostalgia persisted there not as a named condition but as a set of formal principles and practices perturbing claims about the harmony freedom and free play of the mind

Madness and Creativity: Yes, No or Maybe? Anna Abraham, 2015-11-23 The pervasive idea that madness and creativity are intricately linked is one that holds tremendous fascination for both scientists and the general public alike Although this view was at first largely driven by anecdotal evidence showcasing the manifestation of mental illness in individuals who exhibited extraordinary levels of creativity in various spheres of life it initiated a strong impetus to empirically investigate the association between mental health and creativity A variety of approaches and combinations of approaches have been adopted to address this association including clinical personality psychometric behavioral cognitive historiometric and neuroscientific Despite the ever accumulating body of evidence over the past six decades investigating this link what is lacking is a comprehensive overview of the disparate findings from these different approaches that will enable us to address the question of whether there is an empirically founded relationship between creativity and mental illness And if such a link does exist what is the nature of this association The purpose of this Research Topic was to motivate theorists and researchers to answer this question or at least attempt to do so given the available evidence thus far The

themes of interest that were open to exploration in view of this topic included a Which mental disorders are positively associated with creativity b Which mental disorders are negatively associated with creativity c The dynamics of information processing biases positive versus negative associated with psychiatric and high risk populations d Theories regarding the madness creativity link e Personality based studies on creativity f Creativity mental illness and the brain g Genes and creativity h How can studies on neurological populations inform this debate i What are the areas of impact with regard to real world applications and practice j Historical timeline of this question k Evolutionary perspectives on the madness creativity link l Methodological problems associated with this field m Philosophical issues to bear in mind when investigating this domain n The usefulness of the troubled genius concept The invitation to contribute was open to all interested academics regardless of whether they were seasoned explorers within this field of study or just beginning to get their feet wet in its murky waters As a result of adopting this inclusive approach the contributions showcase a wide variety of perspectives from academic departments and institutions the world over What is most encouraging is that so many were willing to openly take on the challenge of tackling this difficult question head on We hope future discussions that follow through as a result of this collective effort will prove to be just as fruitful

Appearance in Reality John Heil, 2021-09-16 In *Appearance in Reality* John Heil addresses a question at the heart of metaphysics how are the appearances related to reality how does what we find in the sciences comport with what we encounter in everyday experience and in the laboratory Objects for instance appear to be colourful noisy self contained and massively interactive Physics tells us they are dynamic swarms of colourless particles or disturbances in fields or something equally strange Is what we experience illusory present only in our minds But then what are minds Do minds elude physics Or are the physicist's depictions mere constructs with no claim to reality Perhaps reality is hierarchical physics encompasses the fundamental things the less than fundamental things are dependent on but distinct from these Heil's investigation advances a fourth possibility the scientific image what we have in physics affords our best guide to the nature of what the appearances are appearances of

HĀ-'ĪSH MŌSHE: Studies in Scriptural Interpretation in the Dead Sea Scrolls and Related Literature in Honor of Moshe J. Bernstein Binyamin Y.

Goldstein, Michael Segal, George J. Brooke, 2017-10-23 The eighteen studies in this volume in honor of Moshe Bernstein on the occasion of his 70th birthday mostly engage with Jewish scriptural interpretation the principal theme of Bernstein's own research career as expressed in his collected essays *Reading and Re-Reading Scripture at Qumran* Brill 2013 The essays develop a variety of aspects of scriptural interpretation Although many of them are chiefly concerned with the Dead Sea Scrolls the significant contribution of the volume as a whole is the way that even those studies are associated with others that consider the broader context of Jewish scriptural interpretation in late antiquity As a result a wider frame of reference for scriptural interpretation impinges upon how scripture was read and re-read in the scrolls from Qumran

Male Suicide and Masculinity in 19th-century Britain Lyndsay Galpin, 2022-04-07 This book shows how interpretations of suicidal

motives were guided by gendered expectations of behaviour and that these expectations were constructed to create meaning and understanding for family friends and witnesses. Providing an insight into how people of this era understood suicidal behaviour and motives, it challenges the assertion that suicide was seen as a distinctly feminine act and that men who took their own lives were feminized as a result. Instead, it shows that masculinity was understood in a more nuanced way than gender binaries allow and that a man's masculinity was measured against other men. Focusing on four common narrative types: the love suicide, the unemployed suicide, the suicide of the fraudster or speculator, and the suicide of the dishonoured soldier, it provides historical context to modern discussions about the crisis of masculinity and rising male suicide rates. It reveals that narratives around male suicides are not so different today as they were then and that our modern model of masculinity can be traced back to the 19th century.

Undergraduate Research Experiences for STEM Students National Academies of Sciences, Engineering, and Medicine, Division on Earth and Life Studies, Board on Life Sciences, Division of Behavioral and Social Sciences and Education, Board on Science Education, Committee on Strengthening Research Experiences for Undergraduate STEM Students, 2017-05-19. Undergraduate research has a rich history and many practicing researchers point to undergraduate research experiences (UREs) as crucial to their own career success. There are many ongoing efforts to improve undergraduate science, technology, engineering, and mathematics (STEM) education that focus on increasing the active engagement of students and decreasing traditional lecture-based teaching, and UREs have been proposed as a solution to these efforts and may be a key strategy for broadening participation in STEM. In light of the proposals, questions have been asked about what is known about student participation in UREs, best practices in UREs design, and evidence of beneficial outcomes from UREs. *Undergraduate Research Experiences for STEM Students* provides a comprehensive overview of and insights about the current and rapidly evolving types of UREs in an effort to improve understanding of the complexity of UREs in terms of their content, their surrounding context, the diversity of the student participants, and the opportunities for learning provided by a research experience. This study analyzes UREs by considering them as part of a learning system that is shaped by forces related to national policy, institutional leadership, and departmental culture, as well as by the interactions among faculty, other mentors, and students. The report provides a set of questions to be considered by those implementing UREs, as well as an agenda for future research that can help answer questions about how UREs work and which aspects of the experiences are most powerful.

The Horn Engaging the Gulf Aleksis Ylönen, 2023-12-28. This book discusses theoretical perspectives of analyzing the relations between the states and non-state actors in the Horn of Africa and their counterparts in the Persian Gulf and the Middle East. Crucially, these relations are examined primarily from the perspective of the diplomatic, economic, and strategic agency of the African states and societal actors. Here, domestic political dynamics and local power play a significant role. Aleksis Ylönen provides a historically informed investigation of recent relations that involve the Gulf States and Türkiye's resurgent interest in the Horn of Africa. The analysis

focuses on the post Arab Spring period following the Iran nuclear deal and the war in Yemen Featuring case studies from Ethiopia Somalia and Eritrea which highlight engagements of the Horn state and societal actors primarily with the Gulf States and Türkiye the study provides an empirical analysis of the interactions and connections between the two regions
