Economics and Climate Emergency Barry

Gills, Jamie Morgan, 2022-08-22 This book explores a series of connected themes focused on the role economics and other influential forms of theory and thinking have played in creating the current predicament and the scope for alternatives and how they might be framed Thirty years have passed since the inception of the United Nations Framework Convention on Climate Change UNFCCC and the beginning of policy on climate change Thirty wasted years To most politicians long term collective interest has been denominated in meaningless units of time a never and forever that has continually delayed action From complacency has come potential disaster and we are now living in a time of climate emergency and ecological breakdown The next decade is a pivotal period requiring fundamental change But numerous impediments remain Continual material energy and economic growth on a planetary scale are manifestly impossible and yet economic theory takes these as a given and political leadership and policy seem unwilling to accept brute reality Instead they offer a series of implausible commitments and pledges rooted in technofixes without addressing the fundamental drivers of the problems the world faces The edited volume explores the issues and offers a variety of ways to think through the problems at hand from postgrowth degrowth and social ecological economics to policy assemblage and transversalism The chapters in this book were originally published in the journal Globalizations

currency markets and the ways in which it is related to liquidity is analyzed Two primary contributions to the literature follow First tail spillovers between currencies in the global FX market are estimated This index is easy to build and does not require intraday data which constitutes an important advantage Second we show that turnover is related to risk spillovers in global currency markets Chapter 6 is entitled Spillovers from the United States to Latin American and G7 Stock Markets A VAR Quantile Analysis This chapter contributes to the studies of contagion market integration and cross border spillovers during both regular and crisis episodes by carrying out a multivariate quantile analysis It focuses on Latin American stock markets which have been characterized by a highly positive dynamic in recent decades in terms of market capitalization and liquidity ratios after a far reaching process of market liberalization and reforms to pension funds across the continent during the 80s and 90s We document smaller dependences between the LA markets and the US market than those between the US and the developed economies especially in the highest and lowest quantiles
