Chapter 10

3. Prove that if f is a real function on a measurable space X such that $\{x : f(x) \geq r\}$ is measurable for every rational r , then f is measurable.

[proof] For each real number α , there exists an decreasing sequence $\{r_n\}$ of rational numbers such that $\lim_{n \rightarrow \infty} r_n = \alpha$. Moreover, we have

$$(\alpha, +\infty) = \bigcup_{n=1}^{\infty} (r_n, +\infty).$$

Hence,

$$f^{-1}((\alpha, +\infty)) = \bigcup_{n=1}^{\infty} f^{-1}(r_n, +\infty).$$

Since sets $f^{-1}(r_n, +\infty)$ are measurable for each n , the set $f^{-1}((\alpha, +\infty))$ is also measurable. Thus f is measurable.

4. Let $\{a_n\}$ and $\{b_n\}$ be sequences in $[-\infty, +\infty]$, and prove the following assertions.

(a)

$$\limsup_{n \rightarrow \infty} (-a_n) = -\liminf_{n \rightarrow \infty} a_n.$$

(b)

$$\limsup_{n \rightarrow \infty} (a_n + b_n) \leq \limsup_{n \rightarrow \infty} a_n + \limsup_{n \rightarrow \infty} b_n,$$

provided none of the terms is of the form $\infty - \infty$.

(c) If $a_n \leq b_n$ for all n , then

$$\liminf_{n \rightarrow \infty} a_n \leq \liminf_{n \rightarrow \infty} b_n.$$

Show by an example that strict inequality can hold in (c).

[proof] (a) Since

$$\sup_{k \geq n} (-a_k) = -\inf_{k \geq n} a_k, \quad n = 1, 2, \dots,$$

Therefore, let $n \rightarrow \infty$, it follows

$$\limsup_{n \rightarrow \infty} (-a_n) = -\liminf_{n \rightarrow \infty} a_n.$$

Analysis of Finite Difference Schemes Boško S. Jovanović, Endre Süli, 2013-10-22 This book develops a systematic and rigorous mathematical theory of finite difference methods for linear elliptic parabolic and hyperbolic partial differential equations with nonsmooth solutions Finite difference methods are a classical class of techniques for the numerical approximation of partial differential equations Traditionally their convergence analysis presupposes the smoothness of the coefficients source terms initial and boundary data and of the associated solution to the differential equation This then enables the application of elementary analytical tools to explore their stability and accuracy The assumptions on the smoothness of the data and of the associated analytical solution are however frequently unrealistic There is a wealth of boundary and initial value problems arising from various applications in physics and engineering where the data and the corresponding solution exhibit lack of regularity In such instances classical techniques for the error analysis of finite difference schemes break down The objective of this book is to develop the mathematical theory of finite difference schemes for linear partial differential equations with nonsmooth solutions Analysis of Finite Difference Schemes is aimed at researchers and graduate students interested in the mathematical theory of numerical methods for the approximate solution of partial differential equations

Pei-Kee Lin, 2011-06-27 This monograph is devoted to a special area of Banach space theory the Köthe Bochner function space Two typical questions in this area are Question 1 Let E be a Köthe function space and X a Banach space Does the Köthe Bochner function space $E(X)$ have the Dunford Pettis property if both E and X have the same property If the answer is negative can we find some extra conditions on E and/or X such that $E(X)$ has the Dunford Pettis property Question 2 Let E be a Köthe function space and X a Banach space Does either E or X contain an l_p sequence if the Köthe Bochner function space $E(X)$ has an l_p sequence To solve the above two questions will not only give us a better understanding of the structure of the Köthe Bochner function spaces but it will also develop some useful techniques that can be applied to other fields such as harmonic analysis probability theory and operator theory Let us outline the contents of the book In the first two chapters we provide some basic results for those students who do not have any background in Banach space theory We present proofs of Rosenthal's l_1 theorem James's theorem when X is separable Kolmogorov's theorem Nizkii's theorem that property V is a separably determined property and Odell-Schlumprecht's theorem that every separable reflexive Banach space has an equivalent $2R$ norm **Image Structure**

Luc Florack, 2013-04-17 Despite the fact that images constitute the main objects in computer vision and image analysis there is remarkably little concern about their actual definition In this book a complete account of image structure is proposed in terms of rigorously defined machine concepts using basic tools from algebra analysis and differential geometry Machine technicalities such as discretisation and quantisation details are de-emphasised and robustness with respect to noise is manifest From the foreword by Jan Koenderink It is my hope that the book will find a wide audience including physicists who still are largely unaware of the general importance and power of scale space theory mathematicians who will find in it a principled and formally tight exposition of a topic awaiting further development and computer scientists who will find here a unified and conceptually well founded framework for many apparently unrelated and largely historically motivated methods they already know and love The book is suited for self study and graduate courses the carefully formulated exercises are designed to get to grips with the subject matter and prepare the reader for original research **Parabolic Quasilinear Equations Minimizing Linear Growth Functionals**
