A photograph of a pharmacy counter. In the foreground, a blue rectangular sign with rounded corners and the text 'RX BIN' in bold black letters stands on the counter. To its right, a pair of black-rimmed glasses rests on an open notebook, with a black pen lying horizontally across the notebook's pages. The counter is white and reflective. In the background, out of focus, are tall metal shelves filled with various boxes and bottles of pharmaceuticals. A window on the right side of the background allows warm, golden light into the scene.

Handbook of Combinatorial Optimization Ding-Zhu Du, Panos M. Pardalos, 2013-03-14 Combinatorial or discrete optimization is one of the most active fields in the interface of operations research computer science and applied mathematics Combinatorial optimization problems arise in various applications including communications network design VLSI design machine vision air line crew scheduling corporate planning computer aided design and manufacturing database query design cellular telephone frequency assignment constraint directed reasoning and computational biology Furthermore combinatorial optimization problems occur in many diverse areas such as linear and integer programming graph theory artificial intelligence and number theory All these problems when formulated mathematically as the minimization or maximization of a certain function defined on some domain have a commonality of

discreteness Historically combinatorial optimization starts with linear programming Linear programming has an entire range of important applications including production planning and distribution personnel assignment finance allocation of economic resources circuit simulation and control systems Leonid Kantorovich and Tjalling Koopmans received the Nobel Prize 1975 for their work on the optimal allocation of resources Two important discoveries the ellipsoid method 1979 and interior point approaches 1984 both provide polynomial time algorithms for linear programming These algorithms have had a profound effect in combinatorial optimization Many polynomial time solvable combinatorial optimization problems are special cases of linear programming e.g. matching and maximum flow In addition linear programming relaxations are often the basis for many approximation algorithms for solving NP hard problems e.g. dualheuristics
