 Conclusion The role of the South African Human Rights Commission      *Leisure in Later Life* Tania Wiseman, 2021-05-15  
 This book analyses leisure choice as a complex concept made more complicated in later life than at any other time The author  
 posits that there are many unanswered questions about the new booming generation of healthy older people and this book  
 asks what it is really like to be old at the beginning of the 21st century in the United Kingdom analysing leisure in older

people in the context of the subtle politics of the day to day Throughout the chapters the author highlights the often missing depictions of older people who enjoy and enact bold informed agency as part of their everyday lives Drawing upon secondary data from the Mass Observation Archive a social thesis of leisure and ageing emerges that challenges the individualism inherent in active ageing It is proposed that the idea of active ageing creates complex constraints to leisure as people strive to measure up to cultural expectations The stories in this book advocate for an appreciation and re evaluation of passive leisure in later life and the enjoyment and freedom it can bring The project is therefore useful to students and researchers of leisure studies gerontology and sociology of ageing *Biology of Cognitive Aging: Model Systems, Technologies and beyond* Shin Murakami, 2017-04-13 Welcome We humans tend to experience forgetfulness when we get old The forgetfulness may become more serious memory impairment dementia Presumably we have known it for a long time but we still do not know the mechanism behind A normal part of forgetfulness is called age related memory impairment AMI which is considered the first step towards mild cognitive impairment MCI transition state and dementia disease state The majority of dementia is attributable to Alzheimer s disease AD Progression to dementia occurs at a high rate in patients with AMI This eBook covers exciting but yet challenging field of cognitive aging AMI is specific to neural tissues of the brain and is considered to be segmental aging It happens not only to humans but also to a variety of species Learning and memory are vulnerable to aging in a wide variety of model species including worms fruit flies insects snails fishes and rodents Aging specifically reduces the ability to learn new information but leaves old memories and procedural memory intact A comparative approach including the use of model systems seems to facilitate understanding of the molecular mechanisms that lead to AMI and AD We advocate research on model systems This eBook also provides the first manuscript co authored with an AD patient to create a feedback loop from patients incorporated into research We also included a manuscript on the semi automated system that was inspired by such a feedback Those may place a nice flavor to this exciting series of comparative research on cognitive aging We hope you enjoy this eBook Warm regards Shin Murakami Ph D
