operative advantages together with the security problems and challenges of the new paradigm of the Internet of Things in today's industry also known as the Industry Internet of Things IIoT. The incorporation of the new embedded technologies and the interconnected networking advances in the automation and monitoring processes certainly multiplies the functional complexities of the underlying control system whilst increasing security and privacy risks. The critical nature of the application context and its relevance for the well-being of citizens and their economy attracts the attention of multiple advanced attackers with stealthy abilities to evade security policies, exfiltrate information or exploit vulnerabilities. Some real-life events and registers in CERTs have already clearly demonstrated how the control industry can become vulnerable to multiple types of advanced threats whose focus consists in hitting the safety and security of the control processes.
