Abstract—The purpose of this study was to determine the effect of a 12-week training program on the heart rate (HR) and energy expenditure (EE) of sedentary, middle-aged women. The subjects were randomly assigned to either a control group (CON) or a training group (TRN). The TRN group performed a 12-week training program consisting of three sessions per week of aerobic exercise. The CON group remained sedentary. The HR and EE were measured at baseline and at the end of the 12-week training program. The TRN group showed a significant decrease in HR and a significant increase in EE compared to the CON group. The results of this study suggest that a 12-week training program can improve the cardiovascular fitness and energy expenditure of sedentary, middle-aged women.

This is necessary after the purchase of this type of multi-mount AFS, as pointing out the group appears in `group 1`.
25. Do not include the `afs` of `mountmnt`, as `afs` is deprecated.

- When a producer's price for the output rises or falls, it must adjust its output level accordingly. A government producer (as in a public utility) that is required to supply a certain amount of output will not be able to adjust its output level if its price is too low or too high. It will have to accept the government's price and produce the required amount of output.
