### Module 8 Assignment 2

#### Part 1: Circuit Building – Series Circuit

Goal: To understand how to build a series circuit, measure potential difference, and current.

Learning Goals: Being able to connect a series circuit, and measure the

<https://www.youtube.com/watch?v=5P3y3v3v3v3> and <https://www.youtube.com/watch?v=5P3y3v3v3v3>

Step 1: Build the first circuit as shown in the video. Connect the battery, switch, and the two light bulbs in series. The battery is the source of potential difference. The switch is the switch. The two light bulbs are the load. The circuit is complete when the switch is closed and the light bulbs are lit.

Step 2: Measure the potential difference across the battery and the potential difference across the two light bulbs. The potential difference across the battery is the electromotive force (EMF) of the battery. The potential difference across the two light bulbs is the voltage drop across the light bulbs. The voltage drop across the light bulbs is the potential difference across the light bulbs.

#### Build, Measure, Analyze

Build the circuit shown in the video. Measure the potential difference across the battery and the two light bulbs. Analyze the data and compare it to the theoretical values.

Record the data in the table below. The theoretical values are given in the table below.

| Resistor | Potential Difference (V) | Current (A) | Power (W) |
|----------|--------------------------|-------------|-----------|

Chik,Po Yuk Ko,Mun Ling Lo,2004-05-20 Classroom Discourse and the Space of Learning is about learning in schools and the central role of language in learning The investigations of learning it reports are based on two premises First whatever you are trying to learn there are certain necessary conditions for succeeding although you cannot be sure that learning will take place when those conditions are met you can be sure that no learning will occur if they are not The limits of what is possible to learn is what the authors call the space of learning Second language plays a central role in learning it does not merely convey meaning it also creates meaning The book explicates the necessary conditions for successful learning and employs investigations of classroom discourse data to demonstrate how the space of learning is linguistically constituted in the classroom Classroom Discourse and the Space of Learning makes the case that an understanding of how the space of learning is linguistically constituted in the classroom is best achieved through investigating classroom discourse and that finding out what the conditions are for successful learning and bringing them about should be the teacher s primary professional task Thus it is fundamentally important for teachers and student teachers to be given opportunities to observe different teachers teaching the same thing and to analyze and reflect on whether the classroom discourse in which they are engaged maximizes or minimizes the conditions for learning is both more culturally situated and more generalizable than many other studies of learning in schools Each case of classroom teaching clearly demonstrates how the specific language culture and pedagogy molds what is happening in the classroom yet at the same time it is possible to generalize from these culturally specific examples the necessary conditions that must be met for the development of any specific capability regardless of where the learning is taking place and what other conditions might be present and encompasses both theory and practice providing a detailed explication of the theory of learning underlying the analyses of classroom teaching reported along with close analyses of a number of authentic cases of classroom teaching driven by classroom discourse data which have practical relevance for teachers Intended for researchers
