

RESOLUTION 792**BAR CODED BOARDING PASS
(BCBP) — VERSION 3**

PSC(30)792

Expiry: Indefinite
Type: B

RESOLVED that:

Members may issue, either for online or interline carriage, a Boarding Pass with version 2 of the Bar Code standard as described herein. All of the following specifications define the required characteristics of the elements and format of the Bar Code on the Boarding Pass or electronic (mobile) device.

Section 1 — General**INTRODUCTION**

This resolution defines a machine-readable bar code for boarding passes or electronic (mobile) devices. This data format supports single segment, multi-segment and inter-line data encoding. The 2-dimensional Bar Code format has the capacity to convey this data allowing a wider range of devices to display or produce boarding passes with encoded data.

1.1 USE OF BAR CODED BOARDING PASS

This resolution addresses the Bar Code format for use on single-segment and multi-segment Boarding Passes. This does not preclude the ability for a Member to adopt their own Bar Code for online use, or for use as bilaterally agreed upon between a Member and an interline partner.

The Bar Code format also permits an airline to include its own proprietary data, and a digital signature alongside the required Bar Code information.

A Bar Coded Boarding Pass may not be issued for more than one passenger.

1.1.1 USE OF PAPER BAR CODED BOARDING PASS

The Bar Code presented here is designed for use on all forms of Boarding Pass stock, including ATB (Automated Ticket and Boarding Pass), General Purpose (i.e. kiosk) and self-printed (i.e. web check-in). The Bar Code shall be printed on the same side of the page as the passenger and flight information. The Bar Code does not require any specific placement or orientation on the Boarding Pass. However it is recommended that the Bar Code be printed adjacent and parallel to an edge of the document in order to facilitate the use of reading devices.

1.1.2 USE OF ELECTRONIC (MOBILE) DEVICE BOARDING PASS

The Bar Codes presented here are designed for use on an electronic (mobile) boarding pass. These Bar Codes should be able to be displayed by all modern electronic (mobile) devices and to have the screen display optimised. Airport Bar Code Readers should be able to read the printed Bar Codes as well as the electronic (mobile) presented symbologies. The digital signature only applies to electronic (mobile) boarding passes.

1.2 ACCEPTANCE

In accordance with their interline travel agreements, Members shall accept and honour Boarding Passes or documentation with Bar Codes issued under this resolution.

**Section 2 — Technical Specifications
Scope**

This data structure is designed exclusively for use on Bar Coded airline boarding documents, passes and Electronic Ticket Itinerary Receipts. The resolution defines the encoding of Bar Code data, and its visual representation and placement on a document or electronic (mobile) device.

The use of this Bar Code does not impose additional requirements or restrictions on what else is displayed on the boarding document or pass.

2.1 TECHNICAL REQUIREMENTS**2.1.1 Printed Boarding Pass**

The Bar Code presented here is a 2-dimensional Bar Code in PDF417 standard containing a structured data message (SDM). This message as defined in ISO/IEC 15438 contains fixed-length fields and variable-length data that can be used by airlines at their discretion.

The PDF417 Bar Code format permits flexibility in the size, readability, robustness and capacity of printed Bar Codes. It is widely supported by current Bar Code scanners and printers, and is already in use within the airline industry.

2.1.2 Electronic (Mobile) Boarding Pass

The Bar Codes presented here are 2-dimensional bar codes in Aztec, Datamatrix and QR code formats containing a structured data message (SDM). Airlines are free to choose one of the three presented Bar Code formats.

The Datamatrix message as defined in ISO/IEC 16022 contains fixed-length fields and variable-length data that can be used by airlines at their discretion.
