Trusted Computing Platforms Sean W. Smith, 2013-12-11 How can one trust computation taking place at a remote site particularly if a party at that site might have motivation to subvert this trust In recent years industrial efforts have advanced the notion of a trusted computing platform as a building block Through a conspiracy of hardware and software magic these platforms attempt to solve this remote trust problem to preserve various critical properties against various types of adversaries However these current efforts are just points on a larger continuum which ranges from earlier work on secure coprocessor design and applications through TCPA TCG to recent academic developments Without wading through stacks of theses and research literature the general computer science reader cannot see this big picture Trusted Computing Platforms Design and Applications fills this gap Starting with early prototypes and proposed applications this book surveys the longer history of amplifying small amounts of hardware security into broader system security and reports real case study experience with security architecture and applications on multiple types of platforms The author examines the theory design implementation of the IBM 4758 secure coprocessor platform and discusses real case study applications that exploit the unique capabilities of this platform The author discusses how these foundations grow into newer industrial designs and discusses alternate architectures and case studies of applications that this newer hardware can enable The author closes with an examination of more recent cutting edge experimental work in this area Trusted Computing Platforms Design and Applications is written for security architects application designers and the general computer scientist interested in the evolution and uses of this emerging technology
