

To Improve Memory

2 pages | 354 words

In psychology, memory is an organism's capability to store, preserve, and then recover the same information. Generally, the classifications of memory used the sensory, short-term and long-term memories. The first two classes are only available for a short period of time compared to long-term memory which could last for a life-time.

The storage process for the brain undergoes an incident in which connections between neuron groups are strengthened. Its patterns are recorded by the brain in an occurrence called the "engram". These engrams will be stored and will remain inactive until they retrieved (Schacter, 1996). The major factor that would affect memory storage would be time; the past is always replaced by recent events and engrams not recalled are simply slipping away from the mind. Improving memory by converting information into long-term-memory can be accomplished by linking it into something that is in the memory.

One of the most popular techniques in improving memory is by the use of mnemonics. This is usually done by making associations between something that is easily remembered and one that is not. Another method would be to gather all the initial letters from the list to be memorized, and then make a single word out of it. Sometimes the word formed can be directly or indirectly related to the information aimed but it could also be unrelated at some instances, depending on the situation.

Researchers state that increasing the supply of oxygen to the brain is a good way of developing a better memory. The best way to achieve this is by undergoing proper and regular exercise. Stress should also be lessened, as well as depression. Sufficient sleeping time should also be done. A better memory can also be achieved if the individual undergoes constant intellectual activities like reading. Keeping the brain healthy will certainly help in reducing memory loss and enhances ones memory retrieval.

Sports-Related Concussions in Youth National Research Council, Institute of Medicine, Board on Children, Youth, and Families, Committee on Sports-Related Concussions in Youth, 2014-02-04 In the past decade few subjects at the intersection of medicine and sports have generated as much public interest as sports related concussions especially among youth Despite growing awareness of sports related concussions and campaigns to educate athletes coaches physicians and parents of young athletes about concussion recognition and management confusion and controversy persist in many areas Currently diagnosis is based primarily on the symptoms reported by the individual rather than on objective diagnostic markers and there is little empirical evidence for the optimal degree and duration of physical rest needed to promote recovery or the best timing and approach for returning to

full physical activity Sports Related Concussions in Youth Improving the Science Changing the Culture reviews the science of sports related concussions in youth from elementary school through young adulthood as well as in military personnel and their dependents This report recommends actions that can be taken by a range of audiences including research funding agencies legislatures state and school superintendents and athletic directors military organizations and equipment manufacturers as well as youth who participate in sports and their parents to improve what is known about concussions and to reduce their occurrence Sports Related Concussions in Youth finds that while some studies provide useful information much remains unknown about the extent of concussions in youth how to diagnose manage and prevent concussions and the short and long term consequences of concussions as well as repetitive head impacts that do not result in concussion symptoms The culture of sports negatively influences athletes self reporting of concussion symptoms and their adherence to return to play guidance Athletes their teammates and in some cases coaches and parents may not fully appreciate the health threats posed by concussions Similarly military recruits are immersed in a culture that includes devotion to duty and service before self and the critical nature of concussions may often go unheeded According to Sports Related Concussions in Youth if the youth sports community can adopt the belief that concussions are serious injuries and emphasize care for players with concussions until they are fully recovered then the culture in which these athletes perform and compete will become much safer Improving understanding of the extent causes effects and prevention of sports related concussions is vitally important for the health and well being of youth athletes The findings and recommendations in this report set a direction for research to reach this goal
