Pituitary-Adrenal Complex E. V. Naumenko,2013-03-09 This monograph gives an up to date account of the original results of the author s research in the complex field of the central control over relationships which have become established in the course of evolution between the hypothalamus and the pituitary gland The author has limited the scope of this research on logical grounds to the study of central chemically reactive structures in the regulation of the adrenal glands through the intermediary of the hypothalamo hypophyseal system Through the author s skill and expertise in the analysis of the extensive and sometimes complicated literature he has successfully undertaken a differential approach to the analysis of the concrete role of catecholamines acetylcholine and serotonin in relation to the endocrine system The vast range of experimental investigations and results of clinical observations published in the last few decades have revealed the humoral neurosecretory factors of the hypothalamus as important regulators of the principal functions of the pituitary gland and through it of the cyclic activity of the peripheral group of endocrine glands Until recently the region of the cascade of regulatory influences preceding the hypothalamus was terra incognita It is for this reason that Evgenii Vladimirovich Naumenko s monograph acquires its special importance for the neurophysiologist for its author has striven by the use of experimental methods to ascertain in detail the nature of influences which for a long time were interpreted as the general dogmas of an abstract nervism *Hormones, Homeostasis and the Brain* ,2011-09-21 Hormones Homeostasis and the Brain

Evolution of Brain and Behavior in Vertebrates R.B. Masterton,M.E. Bitterman,C.B.G. Campbell,Nicholas Hotton,2018-02-19 Originally published in 1976 the object of this volume was to present a relatively up to date overview of what was known what was suspected and what remained to be discovered concerning the general question of the evolution of the vertebrate brain and behaviour and to present a list of references for those who wanted to delve deeper into one or

another aspect of the problem Accordingly it contains chapters by palaeontologists sensory morphologists and physiologists comparative neurologists and comparative psychologists The chapters are arranged in a sequence loosely approximating the order in which the various animals brain structures or behaviour first appeared Therefore the chapters fall naturally into sections each section directed to a group of vertebrates beginning with those which have very remote common ancestry and progressing to those with more recent common ancestry with mankind

Neurobiology of Aging J. Ordy, 2013-06-29 Aging is one of the most universal and inevitable social and scientific challenges confronting man The lives of all multicellular organisms begin with conception extend through phases of development maturity senescence and finally end in death Man is no exception but has the unique feature of a complex brain It plays an integrative role in adaptation to the physical and social environments through reflexes conditioning and more complex forms of learning The brain is a repository for both inherited and acquired information With the development of speech and the formation of symbolic language the human brain has made it possible to transmit information culturally horizontal to other members of society in addition to genetic vertical transmission to progeny This horizontal transmission which has reached its highest form in man is a powerful extension of genetic transmission The brain may provide man all that is of importance in life It has played a key role in the evolution of life by maintaining and extending the life span Many mental or intellectual capacities of man reach a peak in early adulthood remain relatively constant throughout maturity and then appear to decline during senescence Behaviorally there appears to be a decrease in sensory learning and motor functions with aging in all mammalian species As integrated adaptive control systems the brain and neuroendocrines have been closely associated with the homeostatic adaptation to environmental challenges throughout the life span

Advances in Clinical Andrology C.L.R Barratt, I.D. Cooke, 2012-12-06 Infertility is a problem for the couple and evaluation of the couple is preferable in a clinic where both males and females may be seen together The contribution to care by the urologist and the gynaecologist each with an interest in infertility is different but complementary My appreciation of this was sharpened between 1976 and 1985 during my association with the World Health Organization's Special Programme of Research Development and Research Training in Human Reproduction at the meetings of the Steering Committee of its Task Force on Infertility The deliberations of this group were aimed at developing a protocol for investigation of the infertile couple and it became apparent to me as a gynaecologist how important is the precise characterization of the male partner's role to the formulation of the management plan for the infertile couple To improve the quality of our evaluation of the male partner our technical staff were trained in the semen methodology of the laboratory of Dr F Comhaire of Ghent and we were joined by Dr CLR Barratt male reproductive biologist It seemed appropriate to share our enthusiasm for clinical andrology so after discussion with Dr Comhaire and Professor T Glover an eminent male reproductive biologist then of Brisbane who

planned a sabbatical to his native was arranged for 1 and 2 May 1986 Professor Glover in Yorkshire a meeting of the meeting

Neurosecretion - The Final Neuroendocrine Pathway F. Knowles, L. Vollrath, 2013-06-29 This volume marks the end of twenty years of neurosecretion during which there were five symposia namely Naples 1953 Lund 1957 Bristol 1961 Strasbourg 1966 and Kiel 1970 In comparison with these symposia an exceptionally large number of papers were read at this the sixth symposium in London and for economic reasons it has not been possible to publish all the papers in extenso The editors have therefore been obliged to undertake the unenviable work of selection a task made all the more difficult by the excellence and importance of contributions of the symposium We felt that it was of the utmost importance at this moment in the history of neurosecretion to present as complete a picture as possible of the present state of the subject in relation to the past and opportunities for the future We have therefore given some preference to papers with a strong review element research papers in areas of current importance and contributions which deal with recently developed techniques with promise for the future We have more over attempted to strike some balance between the different areas of research on neurosecretion so that the volume as a whole may be of interest to the general reader and that he will find in it a reasonably coherent pattern of thought which demonstrates neurosecretion as the final neuroendocrine pathway We have attempted a certain degree of uniformity of spelling symbols etc
