The Body as Material Culture Joanna R. Sofaer, 2006-02-16 Bodies intrigue us They promise windows into the past that other archaeological finds cannot by bringing us literally face to face with history Yet the body is also highly contested Archaeological bodies are studied through two contrasting perspectives that sit on different sides of a disciplinary divide On one hand lie science based osteoarchaeological approaches On the other lie understandings derived from recent developments in social theory that increasingly view the body as a social construction Through a close examination of disciplinary practice Joanna Sofaer highlights the tensions and possibilities offered by one particular kind of archaeological body the human skeleton with particular regard to the study of gender and age Using a range of examples she argues for reassessment of the role of the skeletal body in archaeological practice and develops a theoretical framework for bioarchaeology based on the materiality and historicity of human remains

Theoretical Aspects of Evolutionary Computing Leila Kallel, Bart Naudts, Alex Rogers, 2013-03-09 During the first week of September 1999 the Second EvoNet Summer School on Theoretical Aspects of Evolutionary Computing was held at the Middelheim campus of the University of Antwerp Belgium Originally intended as a small get together of PhD students interested in the theory of evolutionary computing the summer school grew to become a successful combination of a four day workshop with over twenty researchers in the field and a two day lecture series open to a wider audience This book is based on the lectures and workshop contributions of this summer school Its first part consists of tutorial papers which introduce the reader to a number of important directions in the theory of evolutionary computing The

tutorials are at graduate level and assume only a basic background in mathematics and computer science. No prior knowledge of evolutionary computing or its theory is necessary. The second part of the book consists of technical papers selected from the workshop contributions. A number of them build on the material of the tutorials exploring the theory to research level. Other technical papers may require a visit to the library.

7 Fundamentals of an Operationally Excellent Management System Chitram Lutchman, Douglas Evans, Waddah Shihab Ghanem Al Hashemi, Rohanie Maharaj, 2014-12-16. Developing and maintaining a disciplined management system provides any organization with a blueprint for exceptional performance and success. Indeed for larger multinational corporations a management system is a critical component for sustainable growth and performance management. In this book the authors discuss a series of fundamentals for creating an operationally excellent management system OEMS. The book also examines the business performance impact of an OEMS across leading gas and oil organizations such as Exxon Mobil, BP, Suncor and Chevron. In *7 Fundamentals of an Operationally Excellent Management System* the authors discuss each fundamental in detail and provide the supporting training and workshop materials that are essential for integrating these fundamentals into the business processes of the organization. The seven fundamentals identified by the authors provide a sequential approach for developing and executing an OEMS across any organization. Integrating sound organizational and business practices with personnel and process safety management principles, the book is an invaluable resource for organizations seeking operational discipline and excellence. Well supported with graphics and practical examples, the book provides a simple pathway for an organization to evolve its management system into an OEMS designed to reduce workplace incidents and improve business performance on a sustainable basis. The management system principles discussed in the book are intended for the business leader who is motivated to transition his or her organization from ordinary through best in class to an organization of world class stature and performance.

Human Infancy Daniel G. Freedman, 2016-07-07. Originally published in 1974, this volume is primarily devoted to what is known about human infancy from an ethological evolutionary viewpoint. Included are discussions of pan-specific traits presumably shared by all infants, individual genetic variations on these behaviours as judged by twin studies, sex differences presumably shared by infants of all ethnic groups and genetically based ethnic differences. However, the author favours neither biological determinism nor cultural determinism and does not consider interactionism to be a viable solution. Instead, a monistic position is taken, stressing the inseparability of the innate and the acquired of genetics and environment and of biology and culture. The

heredity environment issue is tackled head on throughout the volume The interaction between the two an implied dualism is described as a statistical abstraction from measured populations while the position here is that heredity and environment are not separable in any single organism In the same vein the author argues that on logical grounds everything one does every cultural act has within it some biological component Otto E.
