

Laboratory Activity #1 — Student Laboratory Packet

Relationships and Biodiversity*A Laboratory Activity for the Living Environment***Introduction**

Botana curus is a valuable plant because it produces Curol, a compound used for treating certain kinds of cancer. Curol cannot be produced in the laboratory. *Botana curus* grows very slowly and is on the endangered species list, so its ability to provide Curol in large quantities is limited.

Species that are more closely related to *Botana curus* are more likely to produce the important substance Curol. Three similar plant species that are plentiful (X, Y, and Z) may be related to *Botana curus*. You will work as a researcher to:

- gather structural and molecular evidence to determine which plant species is most closely related to the hypothetical species, *Botana curus*
- use this evidence to decide which plant species is most likely to serve as a source of the important substance Curol

Safety

- You will need to wear goggles while conducting Tests 4 and 5.
- Do not eat or drink anything in the laboratory while doing this laboratory activity.

Important Note: Record all of your data and answers on these laboratory sheets. You will need to keep them for review before the Regents Examination. Later, you will need to transfer your answers to a separate Student Answer Packet. Your teacher will use the packet in grading your work, and the school will retain it as evidence of your completion of the laboratory requirement for the Living Environment Regents Examination.

Structural Evidence for Relationships

Perform the following tests and record your observations in Table 1 on page 8 of this packet. Use a hand lens or microscope as needed.

Test 1-Structural Characteristics of Plants

- Do not remove the plant samples from the plastic bags/cards.
- Compare the structural characteristics of the plant samples. Record your observations in Table 1 (see page 8).

Test 2-Structural Characteristics of Seeds

- Do not remove the seed samples from the plastic bags/cards.
- Compare the structural characteristics of the seed samples. Record your observations in Table 1.

"Relationships and Biodiversity" is a laboratory activity produced by the State Education Department for use in fulfilling part of the laboratory requirement for the Regents Examination in Living Environment. Reproducing any part of this laboratory activity by other than New York State school personnel is illegal.

Transdisciplinary Research for Understanding and Transforming Food Systems Alexandros Gasparatos,Laura M. Pereira,Cyrille Rigolot,2023-10-30 Food systems are currently facing tremendous challenges and changes globally On the one hand population growth urbanization and increased affluence are expected to catalyze dietary shifts and broader changes to food systems in the coming decades On the other hand food systems and changes therein have major environmental and social ramifications As a result fostering the sustainable transformation of food systems is seen as one of the major challenges for meeting the Sustainable Development Goals SDGs However understanding food systems and transforming them in a sustainable manner is far from straightforward especially as our food systems have multiple intersecting economic social technological and cultural dimensions Moreover food systems encompass different stakeholders operating at different levels with enormously different interests and worldviews **Healing Grounds** Liz Carlisle,2022-03-10 A powerful movement is happening in farming today farmers are reconnecting with their roots to fight climate change For one woman that s meant learning her tribe s history to help bring back the buffalo For another it s meant preserving forest purchased by her great great uncle among the first wave of African Americans to buy land Others are rejecting monoculture to grow corn beans and squash the way farmers in Mexico have done for centuries Still others are rotating crops for the native cuisines of those who fled the American wars in Southeast Asia In Healing Grounds Liz Carlisle tells the stories of Indigenous Black Latinx and Asian American farmers who are reviving their ancestors methods of growing food techniques long suppressed by the industrial food system These farmers are restoring native prairies nurturing beneficial fungi and enriching soil health While feeding their communities and revitalizing cultural ties to land they are steadily stitching ecosystems back together

and repairing the natural carbon cycle This Carlisle shows is the true regenerative agriculture not merely a set of technical tricks for storing CO₂ in the ground but a holistic approach that values diversity in both plants and people Cultivating this kind of regenerative farming will require reckoning with our nation's agricultural history a history marked by discrimination and displacement And it will ultimately require dismantling power structures that have blocked many farmers of color from owning land or building wealth The task is great but so is its promise By coming together to restore these farmlands we can not only heal our planet we can heal our communities and ourselves Mendel's Ark Amy Lynn Fletcher,2014-09-19 Does extinction have to be forever As the global extinction crisis accelerates conservationists and policy makers increasingly use advanced biotechnologies such as reproductive cloning polymerase chain reaction PCR and bioinformatics in the urgent effort to save species Mendel's Ark considers the ethical cultural and social implications of using these tools for wildlife conservation Drawing upon sources ranging from science to science fiction it focuses on the stories we tell about extinction and the meanings we ascribe to nature and technology The use of biotechnology in conservation is redrawing the boundaries between animals and machines nature and artifacts and life and death The new rhetoric and practice of de extinction will thus have significant repercussions for wilderness and for society The degree to which we engage collectively with both the prosaic and the fantastic aspects of biotechnological conservation will shape the boundaries and ethics of our desire to restore lost worlds
