The Neuroscience of Human Relationships Louis Cozolino, 2014-03-24 A revised edition of the best selling text on how relationships build our brains As human beings we cherish our individuality yet we know that we live in constant relationship to others and that other people play a significant part in regulating our emotional and social behavior Although this interdependence is a reality of our existence we are just beginning to understand that we have evolved as social creatures with interwoven brains and biologies The human brain itself is a social organ and to truly understand being human we must understand not only how we as whole people exist with others but how our brains themselves exist in relationship to other brains The first edition of this book tackled these important questions of interpersonal neurobiology that the brain is a social organ built through experience using poignant case examples from the author's years of clinical experience Brain drawings and elegant explanations of social neuroscience wove together emerging findings from the research literature to bring neuroscience to the stories of our lives Since the publication of the first edition in 2006 the field of social neuroscience has grown at a mind numbing pace Technical advances now provide more windows into our inner neural universe and terms like attachment empathy compassion and mindfulness have begun to appear in the scientific literature Overall there has been a deepening appreciation for the essential interdependence of brain and mind More and more parents teachers and therapists are asking how brains develop grow connect learn and heal The new edition of this book organizes this cutting edge abundant research and presents its compelling insights reflecting a host of significant developments in social neuroscience Our understanding of mirror neurons and their significance to human relationships has continued to expand and deepen and is discussed here Additionally this edition reflects the gradual shift in focus from individual brain structures to functional neural systems an important and necessary step forward A great deal of neural overlap has been discovered in brain activation when we are thinking about others and ourselves This raises many questions including how we come to know others and whether the notion of an individual self is anything more than an evolutionary strategy to support our interconnection In short we are just beginning to see the larger implications of all neurological processes how the architecture of the brain can help us to better understand individuals and our relationships This book gives readers a deeper appreciation of how and why relationships have the power to reshape our brains throughout our life

Neuroscience and Art Amy Ione, 2024-08-27 This book is focused on how understanding ourselves as humans is incomplete without considering both biological and cultural aspects Using the neurocultural perspective the book explores how everything in the world is filtered back and forth through the brain and culture The thrust of the book therefore is to explore the power of art in creating a bridge between cultural and neuroscientific lines of inquiry Looking at both clinical and non clinical populations the text examines historical foundations distinguishes congenital developmental conditions from those that are acquired and emphasizes how the brain constructs our sensory experiences Several distinctive features separate this research from other publications First the book opens with a review of how the historical literature is still etched into the ideas we employ to explain elements across the interdisciplinary fields of art aesthetics our sensory experience psychology cognition and well being Second the research adopts a humanistic rather than a philosophical or social science perspective in demonstrating the value of coupling anatomy and physiology with the natural and social environment In this artists from all genres are incorporated Among them are Iris Murdoch Ludwig van Beethoven Leonardo da Vinci Cristoforo de Predis Rembrandt Federico Fellini Chuck Close and David Hockney Case studies demonstrate how neuroscientific research meshes with art individual and cultural variables in ways that range from health and well being to physiological decline and biological traumas These include a case study that examines how Oliver Sacks combined biology and biography in his writings It also explores art projects in several genres inspired by his studies Another case study is on the role of film as a useful clinical tool Here the book also demonstrates that cinematic devices used by filmmakers intersect with perceptual and cognitive neuroscience A defining feature of the analysis is the integration of research on brain injuries with humanistic responses in film literature and the visual arts This section outlines the lack of consensus regarding the causes and treatment of shell shock in World War I before introducing how research and art now work with PTSD TBI Finally the book examines

therapeutic cases of professional and non professional artists concluding with a discussion of synesthesia and the senses

The Assemblage Brain Tony D. Sampson, 2016-12-13 Once upon a time neuroscience was born A dazzling array of neurotechnologies emerged that according to popular belief have finally begun to unlock the secrets of the brain But as the brain sciences now extend into all corners of cultural social political and economic life a yet newer world has taken shape neuroculture which goes further than ever before to tackle the profound ethical implications we face in consequence The Assemblage Brain unveils a major new concept of sense making one that challenges conventional scientific and philosophical understandings of the brain Drawing on Deleuze and Guattari Tony D Sampson calls for a radical critical theory that operates in the interferences between philosophy science art and politics From this novel perspective the book is structured around two questions What can be done to a brain and What can a brain do Sampson examines the rise of neuroeconomics in informing significant developments in computer work marketing and the neuropharmaceutical control of inattentiveness in the classroom Moving beyond the neurocapitalist framework he then reestablishes a place for proto subjectivity in which biological and cultural distinctions are reintegrated in an understanding of the brain as an assemblage The Assemblage Brain unravels the conventional image of thought that underpins many scientific and philosophical accounts of how sense is produced providing a new view of our current time in which capitalism and the neurosciences endeavor to colonize the brain
