**A Philosophy for the Science of Animal Consciousness** Walter Veit,2023-06-16 This book attempts to advance Donald Griffin s vision of the final crowning chapter of the Darwinian revolution by developing a philosophy for the science of animal consciousness It advocates a Darwinian bottom up approach that treats consciousness as a complex evolved and multidimensional phenomenon in nature rather than a mysterious all or nothing property immune to the tools of science and restricted to a single species The so called emergence of a science of consciousness in the 1990s has at best been a science of human consciousness This book aims to advance a true Darwinian science of consciousness in which its evolutionary origin function and phylogenetic diversity are moved from the field s periphery to its very centre thus enabling us to integrate consciousness into an evolutionary view of life Accordingly this book has two objectives i to argue for the need and possibility of an evolutionary bottom up approach that addresses the problem of consciousness in terms of the evolutionary origins of a new ecological lifestyle that made consciousness worth having and ii to articulate a thesis and beginnings of a theory of the place of consciousness as a complex evolved phenomenon in nature that can help us to answer the question of what it is like to be a bat an octopus or a crow A Philosophy for the Science of Animal Consciousness will appeal to researchers and advanced students interested in advancing our understanding of animal minds as well as anyone with a keen interest in how we can develop a science of animal consciousness

Pursuit of Winning Masood Zangeneh, Alex Blaszczynski, Nigel Turner, 2007-11-25 Gambling is an underrecognized problem from both a clinical and a public health point of view. It is not uncommon for an adolescent or adult to participate in one form of gambling or another on a regular basis be it the lottery card playing for money sports wagering or gambling on electronic gaming devices. Nor is it uncommon for such participation to reach excessive or destructive proportions with negative effects on the individual's psychological, social, economic and family life. The results of the National Research Council's 2000 review of empirical studies suggest that 85% of adolescents report having gambled during their lifetime with 73% of adolescents reporting having gambled in the past year. Despite gains in knowledge concerning the correlates and risk factors associated with severe gambling problems among youth during the past ten years, a general lack of public and parental awareness exists. This raises serious mental health and public policy concerns. Written from an international perspective, this book covers gambling research and interventions in the following categories: role of helpline services; a Jungian transpersonal approach to treatment; cognitive therapy for problem gambling; pharmacological interventions for problem gambling; desensitization; biofeedback as treatment for problem gambling; binge gambling; pathological gambling; past and contemporary aboriginal peoples' experiences with gambling; problem gambling counselor certification; measurement of outcomes in problem gambling; treatment overview of teen gambling; related issues from leading researchers.
