

How To Properly Fill a Pothole

1. Clean Out the Pothole

BLOW

Begin by blowing any loose debris and/or water out of the pothole and towards the edge of the road. Aim the blower directly down into the pothole for the best result.

UNDERCUT

Next, undercut the edges of the pothole to remove any loose material clinging to the inside of the pothole. Doing so will allow the pothole patch to cling better to the whole pothole and lead to a better patch later.

BLOW

Finish preparing the pothole for filling by blowing it out one more time.

2. Load the Pothole

Pile your patch material into the pothole and use a tute rake to define the edges of the pothole.

Be sure to overfill the pothole by about 2-2.5 inches to allow yourself more material to work with.

It's important to make sure that the undercut areas are filled as closely as the non-undercut areas.

3. Begin Static Rolling

With a single drum vibratory roller, roll out the patch working from hard pavement to soft patch. The roller should remain idle throughout the process.

4. Activate Your Roller

Turn on your vibratory roller and begin rolling out the patch working from hard pavement to soft patch. Work across the patch from right to left, proceeding from compacted to non compacted.

Start at one edge of the patch and work from hard pavement to soft patch. When one section is complete, put the machine backwards using the skid bar to shave off any lumps or uneven spots.

Continue to work the patch material from hard to soft.

Compact the repair so it is plane with the road. Be sure to match the road grade.

5. Refine Your Edges

Turn on your vibratory roller and begin rolling out the patch working from hard pavement to soft patch. Work across the patch from right to left, proceeding from compacted to non compacted.

6. Clean Up

Using a broom or a leaf blower, move the patch crumbe out of the lane of travel and move on to the next pothole.

Did You Know...

According to the Federal Highway Association's 1999 report, the proper way to achieve a semi-permanent pothole repair requires:

"Water and debris are removed from a hole, the sides are squared up, and coldpatch material is placed in the hole and compacted by rollers or vibratory compactors."

Federal Highway Administration Pavement Technology Program Report - 1999

Your City's Drain System Is Causing Potholes

City and town roads that are most susceptible to potholes are ones with poor drainage and high traffic.

Beware Extreme Cold (and Heat)

Roads that experience extreme freeze/thaw cycles, and/or dry summers, are also very susceptible to pothole development.

Check Your Fill Shape

SMOOTH

This is the ideal. The patch should be plane with the road after being smoothed over with a tute rake.

TURTLE

If your patch creates a dome shape, take a few more moments to smooth out the patch so it's plane with the road.

Not doing so can cause water to dam up, and continue damage to the road way.

BIRD BATH

If your patch creates a bird bath shape when stepped out, likely more debris will end up in smoothing it out until it is plane with the road.

Not doing so can cause water to pool, leading to continued damage to the road.
