Bowker's Software for Schools, 1987 **Algebraic and Coalgebraic Methods in the Mathematics of Program**

Construction Roland Backhouse, Roy Crole, Jeremy Gibbons, 2003-07-31 Program construction is about turning specifications of computer software into implementations Recent research aimed at improving the process of program construction exploits insights from abstract algebraic tools such as lattice theory fixpoint calculus universal algebra category theory and allegory theory This textbook like tutorial presents besides an introduction eight coherently written chapters by leading authorities on ordered sets and complete lattices algebras and coalgebras Galois connections and fixed point calculus calculating functional programs algebra of program termination exercises in coalgebraic specification algebraic methods for optimization problems and temporal algebra

Mathematics Curriculum in Pacific Rim Countries - China, Japan, Korea, and Singapore

Zalman Usiskin, Edwin Willmore, 2008-09-01 This volume contains the proceedings of the First International Curriculum Conference sponsored by the Center for the Study of Mathematics Curriculum CSMC The CSMC is one of the National Science Foundation Centers for Learning and Teaching Award No ESI 0333879 The countries China Japan Korea and Singapore in alphabetical order which also happens to be the order of their populations have each been in the news because of their performance on international tests and or their economic performance and potential They also have centralized education ministries that create a single mathematics curriculum framework followed in the entire country In all these countries curricula are differentiated for students with different interests usually around Grade 10 or 11 We think the reader will agree that the papers are of very high quality befitting the standing of the individuals who were invited but particularly notable for our international speakers because in three of these countries English is not the speaker's first language Following each paper we have included a short biography of the author's so that the reader can understand the perspective of the paper's author **Choice**, 1973 **CAS. Curriculum Advisory Service Quarterly**, 1966 **Calculus Two** Francis

J. Flanigan, Jerry L. Kazdan, 1998-11-06 Calculus and linear algebra are two dominant themes in contemporary mathematics and its applications The aim of this book is to introduce linear algebra in an intuitive geometric setting as the study of linear maps and to use these simpler linear functions to study more complicated nonlinear functions In this way many of the ideas techniques and formulas in the calculus of several variables are clarified and understood in a more conceptual way After using this text a student should be well prepared for subsequent advanced courses in both algebra and linear differential equations as well as the many applications where linearity and its interplay with nonlinearity are significant This second edition has been revised to clarify the concepts Many exercises and illustrations have been included to make the text more usable for students *Subject Catalog*, 1981 Library of Congress, 1981 *American Book Publishing Record Cumulative*,
