Methodological Developments in Data Linkage Katie Harron, Harvey Goldstein, Chris Dibben, 2015-12-14 A comprehensive compilation of new developments in data linkage methodology The increasing availability of large administrative databases has led to a dramatic rise in the use of data linkage yet the standard texts on linkage are still those which describe the seminal work from the 1950 60s with some updates Linkage and analysis of data across sources remains problematic due to lack of discriminatory and accurate identifiers missing data and regulatory issues Recent developments in data linkage methodology have concentrated on bias and analysis of linked data novel approaches to organising relationships between databases and privacy preserving linkage

Methodological Developments in Data Linkage brings together a collection of contributions from members of the international data linkage community covering cutting edge methodology in this field It presents opportunities and challenges provided by linkage of large and often complex datasets including analysis problems legal and security aspects models for data access and the development of novel research areas New methods for handling uncertainty in analysis of linked data solutions for anonymised linkage and alternative models for data collection are also discussed

Key Features Presents cutting edge methods for a topic of increasing importance to a wide range of research areas with applications to data linkage systems internationally Covers the essential issues associated with data linkage today Includes examples based on real data linkage systems highlighting the opportunities successes and challenges that the increasing availability of linkage data provides Novel approach incorporates technical aspects of both linkage management and analysis of linked data This book will be of core interest to academics government employees data holders data managers analysts and statisticians who use administrative data It will also appeal to researchers in a variety of areas including epidemiology biostatistics social statistics informatics policy and public health
