

Using Trigonometric Identities **18.57**

The following are collections of identities that are true for all values of the variables in the identities. Functions are defined.

Trigonometric Identities

$$\sin(-\theta) = -\sin \theta$$

$$\cos(-\theta) = \cos \theta$$

$$\tan(-\theta) = -\tan \theta$$

$$\csc(-\theta) = -\csc \theta$$

$$\sec(-\theta) = \sec \theta$$

$$\cot(-\theta) = -\cot \theta$$

Quotient Identities

$$\tan \theta = \frac{\sin \theta}{\cos \theta}$$

$$\cot \theta = \frac{\cos \theta}{\sin \theta}$$

Pythagorean Identities **These are known to be properties of Pythagoras and identity to follow:** **Remember these identities:**

$$\sin^2 \theta + \cos^2 \theta = 1$$

$$\tan^2 \theta + 1 = \sec^2 \theta$$

$$\cot^2 \theta + 1 = \csc^2 \theta$$

These identities are used in evaluating trigonometric functions, simplifying trigonometric expressions, and solving trigonometric equations.

Evaluating Trigonometric Functions

Ex Find all solutions (angle measurements in Quadrant I) and θ is $\frac{\pi}{6}$ that $\sin \theta$ and $\cos \theta$

Ex Evaluate the trigonometric identity to solve for θ :

$$\sin^2 \theta + \cos^2 \theta = 1 \quad \text{or} \quad \sin^2 \theta + \cos^2 \theta = 1$$

$$\sin^2 \theta = 1 - \cos^2 \theta$$

$$\sin^2 \theta = 1 - \cos^2 \theta \quad \text{or} \quad \sin^2 \theta = 1 - \cos^2 \theta$$

Ex There are two solutions to this equation. Simplify both sides and then solve for θ .
Remember: simplify both sides and solve for θ .

Ex Evaluate the trigonometric identity to solve for θ :

$$\sin^2 \theta = 1 - \cos^2 \theta \quad \text{or} \quad \sin^2 \theta = 1 - \cos^2 \theta$$

Teaching and Learning High School Mathematics Charlene E. Beckmann, Denisse R. Thompson, Rheta N. Rubenstein, 2009-11-02 Too many high school students faced with mathematics in courses at the level of algebra and beyond find themselves struggling with abstract concepts and unwilling to pursue further study of mathematics When students curtail their course taking in mathematics they may be impacting their college and career options Thus high school mathematics teachers have the responsibility to help students recognize the value and importance of mathematics while also designing instruction that makes mathematics accessible to all students Ball and Bass 2000 as well as other mathematics educators have recognized that mathematics teachers not only need to know mathematics content and mathematics pedagogy i e teaching strategies but they also need to know how these ideas are integrated This mathematical knowledge for teaching is the knowledge that teachers of mathematics need and it differs from the knowledge that research or applied mathematicians must know This text is designed to provide teachers with insights into this mathematical knowledge for teaching Teaching and Learning High School Mathematics is likely different from many other texts that you have used It integrates both content and pedagogy to help you develop and build your own understanding of teaching The text is designed to help you develop deep conceptual understanding of fundamental mathematics Ma 1999 so that you are able to approach mathematics from multiple perspectives with many tools Such flexibility in teaching is essential if teachers are to help all students become mathematically proficient Throughout this book you are encouraged to work in cooperative teams This strategy is designed to help you develop a mathematics learning community and build a professional network that will be a valuable resource during your professional career Hopefully you will experience the benefits of engaging in rich mathematical discussions with peers and consider how to encourage such learning environments in your own classrooms Lesson planning is another element pervasive throughout this text To help teachers plan for effective student centered lessons the Question Response Support QRS Guide is introduced in Lesson 1 1 and used throughout the remainder of the lessons The QRS Guide is a tool on which teachers may record tasks or questions Q for students expected and observed student responses R and teacher support S in the form of additional just enough questions to support students in their progress on the task In each unit teachers expand their repertoire of teaching and learning elements and strategies and incorporate these elements as they plan additional lesson segments In Unit 4 lesson planning is formally introduced as teachers put together elements from previous units into complete cohesive lesson plans **Workshop Precalculus** Nancy Baxter-Hastings, 2002-02-22 The Workshop Precalculus text is part of the successful Workshop Mathematics Project based at Dickinson College Pennsylvania It combines interactive teaching and collaborative learning such that students become active participants in the learning process In this new text this proven pedagogy is used to cover topics in precalculus linear and quadratic functions and trig functions for example *Precalculus: A Functional Approach to Graphing and Problem Solving*

Karl Smith, 2013 *Precalculus A Functional Approach to Graphing and Problem Solving* prepares students for the concepts and applications they will encounter in future calculus courses. In far too many texts, process is stressed over insight and understanding and students move on to calculus ill equipped to think conceptually about its essential ideas. This text provides sound development of the important mathematical underpinnings of calculus, stimulating problems and exercises, and a well developed, engaging pedagogy. Students will leave with a clear understanding of what lies ahead in their future calculus courses. Instructors will find that Smith's straightforward, student friendly presentation provides exactly what they have been looking for in a text.

Mathematics for High School Teachers Zalman Usiskin, 2003 For algebra or geometry courses for teachers, courses in topics of mathematics, capstone courses for teachers or other students of mathematics, graduate courses for practicing teachers or students who want a better understanding of mathematics. Filling a wide gap in the market, this text provides current and prospective high school teachers with an advanced treatment of mathematics that will help them understand the connections between the mathematics they will be teaching and the mathematics learned in college. It presents in depth coverage of the most important concepts in high school mathematics: real numbers, functions, congruence, similarity, and more.

Announcement University of Michigan--Dearborn, 1975 Pedagogy and Content in Middle and High School Mathematics G. Donald

Allen, Amanda Ross, 2017-11-10 The book provides an accumulation of articles included in *Focus on Mathematics Pedagogy and Content*, a newsletter for teachers published by Texas A M University. Each article presents a discussion of a middle or high school mathematics topic. Many of the articles are written by professors at Texas A M University. The book is broken into three parts with the first part focusing on content and pedagogy related to the NCTM content strands of Number, Algebra, Geometry, Measurement and Statistics, and Probability. Articles include an in depth presentation of mathematical content as well as suggested instructional strategies. Thus, the integration of content knowledge and pedagogical knowledge is emphasized. The second and third parts apply to assessments, mathematical games, teaching tips, and technological applications. While other pedagogical reference books may provide an in depth look at how to teach a topic, this book includes articles that also explain a topic in great length. Thus, teachers may develop content knowledge first and then re-read each article in order to learn appropriate instructional strategies to use. Many articles include technological applications which are interspersed throughout the book. In addition, a special section which includes helpful information, available tools, training sessions, and other references for using technology in mathematics is also presented.
