The first time I saw this plane I knew I wanted one. There is something about it that makes it appear delicate and sweet, but with the ability to become aggressive and agile.

After watching some of the videos on the Precision Aerobatics web site, I was then hooked. The full size Katana is an undeniably aerobatic aircraft that has many very successful models fashioned after it, and this one continues its legacy.

The Katana Mini from Precision Aerobatics is an electric powered 40" 2D plane with plug in wings and a bare air frame weight of only 370g. The all up flying weight is highly variable depending on your power train and battery pack but with these specs and 375.1sq inches, you are primed to end up with a highly agile and capable model. With the recommended package from PA, the review model weighed in at 570g and with the 2200mAh LiPo battery 730g ready to fly.

The Box

Nothing beats the excitement of opening the box in a high quality, well presented MBF. This was no exception. All components were individually packed in plastic and in perfect shape

including the covering. Care had to be taken removing each component as they were taped individually to the inside of the box. This helps to prevent shipping damage, but does require a bit of extra care to take them out. The first thing I found remarkable was the extreme lightness of each piece. Wing panels are the lightest I have ever seen, and through the transparent covering seem to be well built. The laser cutting and fit up of each joint was flawless and the wing panels were dead straight and surprisingly stiff when subjected to wing forces. The fuselage was similar, and equally well built. Stabilizers and control surfaces were also in perfect condition with no warping or distortion present.

My first love for some time has been giant scale aerobatics, and the type of engineering displayed in this model is very similar to what you see in much larger planes. This should not be surprising as the Australian based company (Precision Aerobatics) who designed and build the Katana are leaders in giant scale aerobatics.
