To be a successful teacher or student of education, it is crucial to acknowledge the learning process. This book explains major learning theories, how they have developed, what beliefs and evidence they have been based upon, and what they mean for teachers' practice. Key areas considered include: How different theories including behaviourism, constructivism, cognitivism, and social culturalism offer alternate perspectives about learning. Detailed case studies in a range of school contexts show how theoretical considerations play out in real situations. How a deeper understanding of learning theory can enhance your professional teacher knowledge and practice. The book also includes a range of practical tasks and questions for consideration to encourage deeper reflection about teaching and learning processes. This is essential reading for anyone training to teach in primary and secondary education. Education Studies students and teachers seeking to refresh their knowledge and understanding of different perspectives of learning. Debra McGregor is Professor in Education at Oxford Brookes University. Abstract Mathematical Cognition Wolfgang Grodd, Philippe Chassy, 2016-08-09. Despite the importance of mathematics in our educational systems, little is known about how abstract mathematical thinking emerges. Under the uniting thread of mathematical development, we hope to connect researchers from various backgrounds to provide an integrated view of abstract mathematical cognition. Much progress has been made in the last 20 years on how numeracy is acquired. Experimental psychology has brought to light the fact that numerical cognition stems from spatial cognition. The findings from neuroimaging and single cell recording experiments converge to show that numerical representations take place in the intraparietal sulcus. Further research has demonstrated that supplementary neural networks might be recruited to carry out subtasks; for example, the retrieval of arithmetic facts is done by the angular gyrus. Now that the neural networks in charge of basic mathematical cognition are identified, we can move onto the stage where we seek to understand how these basic skills are used to support the acquisition and use of abstract mathematical concepts. *Research and Development in*

University Mathematics Education Viviane Durand-Guerrier, Reinhard Hochmuth, Elena Nardi, Carl Winsløw, 2021-04-15 In the last thirty years or so the need to address the challenges of teaching and learning mathematics at university level has become increasingly appreciated by university mathematics teachers and beyond by educational institutions around the world Indeed mathematics is both a condition and an obstacle to success for students in many educational programmes vital to the 21st century knowledge society for example in pure and applied mathematics engineering natural sciences technology economics finance management and so on This breadth of impact of mathematics implies the urgency of developing research in university mathematics education and of sharing results of this research widely This book provides a bespoke opportunity for an international audience of researchers in didactics of mathematics mathematicians and any teacher or researcher with an interest in this area to be informed about state of the art developments and to heed future research agendas This book emerged from the activities of the research project INDRUM acronym for International Network for Didactic Research in University Mathematics which aims to contribute to the development of research in didactics of mathematics at all levels of tertiary education with a particular concern for the development of early career researchers in the field and for dialogue with university mathematicians The aim of the book is to provide a deep synthesis of the research field as it appears through two INDRUM conferences organised in 2016 and 2018 It is an original contribution which highlights key research perspectives addresses seminal theoretical and methodological issues and reports substantial results concerning the teaching and learning of mathematics at university level including the teaching and learning of specific topics in advanced mathematics across a wide range of university programmes **Lessons Learned from Research on Mathematics Curriculum**
