Reaction Rate Theory and Rare Events  
Baron Peters,2017-03-22 Reaction Rate Theory and Rare Events bridges the historical gap between these subjects because the increasingly multidisciplinary nature of scientific research often requires an understanding of both reaction rate theory and the theory of other rare events The book discusses collision theory transition state theory RRKM theory catalysis diffusion limited kinetics mean first passage times Kramers theory Grote Hynes theory transition path theory non adiabatic reactions electron transfer and topics from reaction network analysis It is an essential reference for students professors and scientists who use reaction rate theory or the theory of rare events In addition the book discusses transition state search algorithms tunneling corrections transmission coefficients microkinetic models kinetic Monte Carlo transition path sampling and importance sampling methods The unified treatment in this book explains why chemical reactions and other rare events while having many common theoretical foundations often require very different computational modeling strategies Offers an integrated approach to all simulation theories and reaction network analysis a unique approach not found elsewhere Gives algorithms in pseudocode for using molecular simulation and computational chemistry methods in studies of rare events Uses graphics and explicit examples to explain concepts Includes problem sets developed and tested in a course range from pen and paper theoretical problems to computational exercises

Modern Enolate Chemistry Manfred Braun,2015-11-24  
Authored by one of the world s leading synthetic chemists in the field this reference presents modern enolate chemistry with an emphasis on metal O enolates in asymmetric synthesis While great care is taken to cover novel successful concepts such classical methods as the famous Evans enolates are equally highlighted Throughout the book representative reaction procedures are presented thus helping readers to find the best solution for their own synthetic problem Of high interest to synthetic chemists in academia as well as the pharmaceuticals agrochemicals and fine chemicals industries
