Behind the Fog Lisa Martino-Taylor, 2017-07-28 Behind the Fog is the first in depth comprehensive examination of the United States Cold War radiological weapons program The book examines controversial military sponsored studies and field trials using radioactive simulants that exposed American civilians to radiation and other hazardous substances without their knowledge or consent during the Cold War Although Western biological and chemical weapons programs have been analyzed by a number of scholars Behind the Fog is a strong departure from the rest in that the United States radiological weapons program has been generally unknown to the public Martino Taylor documents the coordinated efforts of a small group of military scientists who advanced a four pronged secret program of human subject radiation studies that targeted unsuspecting Americans for Cold War military purposes Officials enabled such projects to advance through the layering of secrecy by embedding classified studies in other studies and through outright deception Agency and academic partnerships advanced supported and concealed the studies from the public at large who ultimately served as unwitting test subjects Martino Taylor s comprehensive research illuminates a dark chapter of government secrecy the military industrial academic complex and large scale organizational deviance in American history In its critical approach Behind the Fog effectively examines the mechanisms that allow large scale elite deviance to take place in modern society
