**Gender in Real Time** Kath Weston,2018-10-24 After decades of innovative scholarship that galvanized a field and shattered a world of preconceptions the study of gender now appears to languish It has been a long while since the publication of a provocative and influential text like Judith Butler s Gender Trouble Kath Weston argues that the problem is one of time For too long gender studies has been preoccupied with the visual with ample attention given to issues of performativity and embodiment all at the expense of time Gender in Real Time makes a provocative and important new argument that will revolutionize the field of gender studies Introducing temporality into the equation and examining the ways gender exists Weston uses the tools of political economy the history of mathematics Darwinian evolution and a bit of physics to propel gender studies toward the future Startling new concepts like zero gender and the meaning of time claims are introduced Moreover the impact of our time sensitive society with its ever increasing need for speed and accelerated

**Real-Time Control of Walking** M.D. Donner,2013-06-29 I wonder whether Karel Capek imagined in 1923 that by his use of the Czech word for forced labor *rohota* to name the android creations of Mr Rossum he was naming an important technology of his future Perhaps it wasn't Capek's work directly but rather its influence on Lang's movie *Metropolis* in 1926 that introduced the term to the popular consciousness In the public mind ever since a robot has been a mechanical humanoid tireless and somewhat sinister In the research community the field of robotics has recently reached large size and respectability but without answering the question What is robotics or perhaps What is a robot There is no real consensus for a precise definition of robotics I suppose that Capekian mechanical men if one could build them are robots but after that there is little agreement Rather than try to enumerate all of the things that are and are not robots I will try to characterize the kinds of features that make a system a robot A candidate definition of a robot is a system intended to achieve mechanical action with sensory feedback from the world to guide the actions and a sophisticated control system connecting the sensing and the actions
